PREFACE

CONCEPTUAL OVERVIEW: "SUPPORT THE WARFIGHTING
COMMANDERS-IN-CHIEF" (ARMY COMPONENT COMMANDERS)

The ROBUST Task Force evaluated the Table of Distribution and Allowance (TDA) structure of the Army within the context of the dual imperatives of providing effective, efficient support to the warfighting Commanders-in-Chief (CINC) and improving the Army's capability to accomplish critical mobilization missions. This volume of the Task Force final report addresses Army Component Commands which support the OCONUS Unified CINCs.

The Task Force developed its conceptual framework for the future management headquarters and sustainment base structure of the Army by focusing on the organizational requirements of the Army in the year 2004. It was apparent from the initial review of the existing TDA structure that simplification and clarification of the organization structure were necessary. These two themes served to anchor the development of the conceptual framework within which the major concepts and proposals of the ROBUST effort were developed.

The Task Force reviewed the progress of the development of the AirLand Battle Future (ALB-F) Umbrella Concept by the Concepts Development Directorate, Combined Arms Combat Developments Activity (CACDA). The ALB-F Umbrella Concept endeavors to link Army force capabilities and structure to our future global national interests. Although the ALB-F study is focused on tactical units and doctrine, their vision of the future required capabilities of the Army and emphasis on joint and combined operations reinforced the ROBUST Task Force's concentration on the central role of the Army component commands. Each army component commander must be organized to support the Unified commander in the accomplishment of his mission within his area of responsibility (see Figure II-1).

- COMMANDS ALL ARMY UNITS. EMPLOYS THEM THROUGH MTOE CORPS AND THEATER ARMY AREA COMMAND.
- PROVIDES THE C³I FRAMEWORK FOR TRANSITION TO WAR.
- INTEGRATES

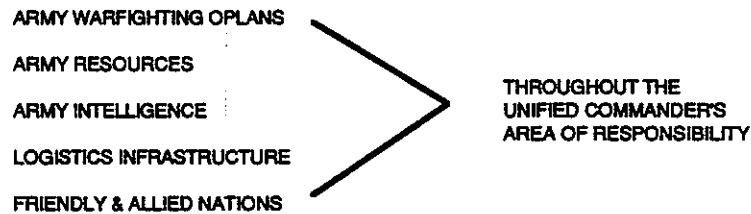

Figure II-1. Army Component Commands

Volume II concentrates on six geographical areas of responsibility (AOR) and the related Army component commands. The AOR corresponds to the missions of the Unified combatant commands (USCENTCOM, USEUCOM, USPACOM, USSPACECOM, USSOUTHCOM). Major Army missions in the Continental United States/North America are the responsibility of the United States Army Forces Command (FORSCOM) in its role as a Specified Command. (CONUS organizations are the subject of Volume III of this report). Additionally, the two Unified Commands (USSOCOM and USTRANSCOM) without a geographical AOR, are addressed in this Volume. (see Figure II-2).

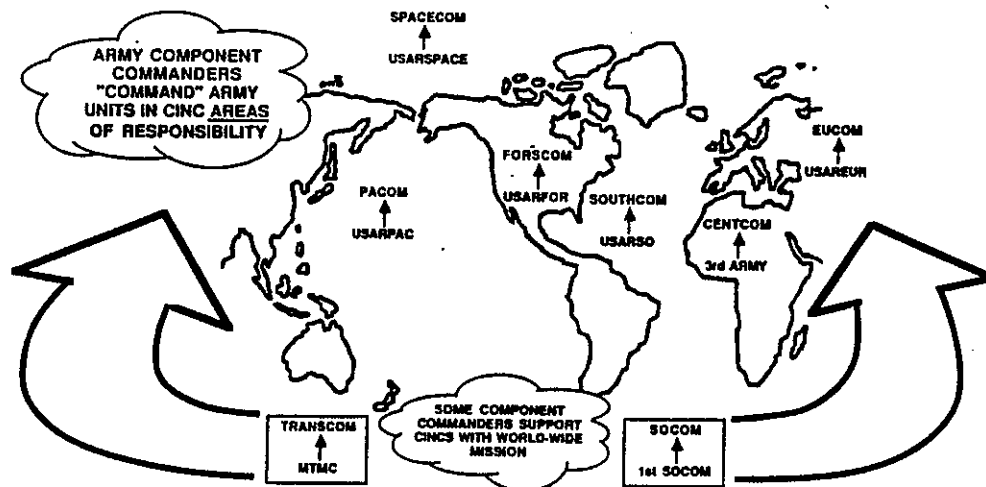

Figure II-2. Geographical Areas of Responsibility

Just as the Congress sought to strengthen the role of the Unified and Specified Commands, through the Department of Defense (DOD) Reorganization Act of 1986, the Task Force sought ways to enhance the authority of the Army component commands that directly support the Unified commands. The Task Force recommends that future force structure decisions conform to two fundamental concepts. First, a single Army Component Command supports each Unified combatant commander. Second, Army Component Commanders, in general, command all Army units located within their respective geographical areas of responsibility. Both of these concepts simplify and clarify Army command relationships.

CHAPTER 7

ARMY COMPONENT COMMAND - U.S. ARMY, EUROPE (USAREUR)

The mission of U.S. Army, Europe (USAREUR) is to prevent war by training combat-ready forces in-theater and providing and sustaining, in coordination with host nations, the capability to receive, equip, arm, maintain and supply U.S. mobilization forces, while ensuring quality of life support to U.S. personnel stationed in-theater

U.S. Army, Europe today is the result of 40 plus years of constant study (internal and external) and reorganization to meet treaty commitments, perceived threat, and to comply with Congressional mandates on manpower ceilings and authorized levels of funding. Additionally, during the Vietnam era Europe received a lower resourcing priority and many changes were often driven by necessary choices which were not the most efficient or effective. Studies such as the 1976 Tooth to Tail Study, USAREUR Support Structure Study (US3), implementation of programs such as VOLAR, Division 86 reorganization, and the subsequent Army of Excellence (AOE) restructuring which occurred while Division 86 was in progress, have had significant affect on USAREUR's mission execution.

Analysis of the current documented TDA structure, Mission Essential Tasks Lists (METL), and comments provided by the On Site Evaluation Teams have resulted in the development of five observations and proposals which merit further study. While the charter of the ROBUST Task Force was focused on the TDA structure of the Army, consideration of TOE/MTOE doctrine and organizational structure as it exists today and possible concepts for the future were considered in the formulation of recommendations.

7.1 OBSERVATION

Extensive numbers of TDA and TDA augmentations in Europe supplement the MTOE logistics organizations of the Theater Army Area Command (TAACOM).

7.1.1 SCOPE

Currently one Theater Army Area Command (21st TAACOM, formerly the 21st Support Command) is forward deployed in Europe. Elements of two other TAACOMs are physically present. The 7th SUPCOM (7th TAACOM), which is subordinate to the 21st TAACOM, and a forward deployed planning cell of the 310th TAACOM which is subordinate to the U.S. Army Reserve.

7.1.2 PROPOSAL

Review TAACOM model and organization (OCONUS) and transfer mission and space authorizations to supported MTOE.

7.1.3 CRITERION

Military positions in OCONUS TDA are questionable. If there is a wartime requirement for the position or if the space will be used to fill a low ALO MTOE unit the MTOE position should be filled.

7.1.4 ANALYSIS

This issue was selected for consideration as a result of an analysis of the TDA structure supporting the 21st TAACOM, and reports and discussions with the European On Site Evaluation Team (OSET). There are 149 (83 MTOE, 66 TDA/TDA Augmentation) authorization documents in the 21st TAACOM. Many of the MTOE are less than ALO 1. Table 7-1 is a summary and comparison of the MTOE and TDA authorizations.

TABLE 7-1. SUMMARY AND COMPARISON OF MTOE AND TDA AUTHORIZATION

	Officer		Warrant Officer		Enlisted		Civilian/Local Nationals
MTOE	634	(71%)	168	(73%)	6330	(81%)	0
TDA	<u>258</u>	(29%)	<u>62</u>	(27%)	<u>1451</u>	(19%)	<u>22089</u> (100%)
TOTALS	892	(100%)	230	(100%)	7781	(100%)	22089 (100%)

7.1.5 CONCLUSION

A significant portion (76.9%) of the total authorized CSS structure (21st TAACOM) is TDA. Most of the TDA functions will continue during hostilities and should be converted to TOE/MTOE structure.

7.1.6 IMPLEMENTATION

USAREUR conduct a review and analysis of documented TDA functions and where feasible: convert TDA organizations to MTOE; transfer TDA Augmentation spaces to MTOE, redistribute military spaces to improve the ALO of the forward deployed units; change MTOE structure to reflect mission.

Once implementation occurs, an analysis of the force structure requirements for contingency plans could reduce and generate changes in the type and sequencing of planned reinforcing units.

A related issue to this proposal is the accounting for local national employees as part of force structure (see Chapter 4, Issue 4.2).

7.2 OBSERVATION

U.S. Military Community Activity (USMCA) Europe TDA contain missions and authorizations which perform wartime functions.

7.2.1 SCOPE

The 39 military community (MILCOM) organizations in Europe. TDA authorizations equal 343 officers, eight warrant officers, 2,059 enlisted and 31,984 civilian/local nationals (see Table 7-2).

7.2.2 PROPOSAL

Revise doctrine and TOE to include an "operating base" (also define as a base of operations) concept of the MILCOM in Area Support Group (ASG) or Support Battalion MTOE. An operating base is defined as, "as area or facility from which tactical operations begin or are established to provide supplies, services, and facilities support to sustain operations. Operating bases are semi-permanent and under the control of Area Support Groups or the Regional Defense Zone".

7.2.3 CRITERION

Missions which will continue during hostilities (see Figure 7-1).

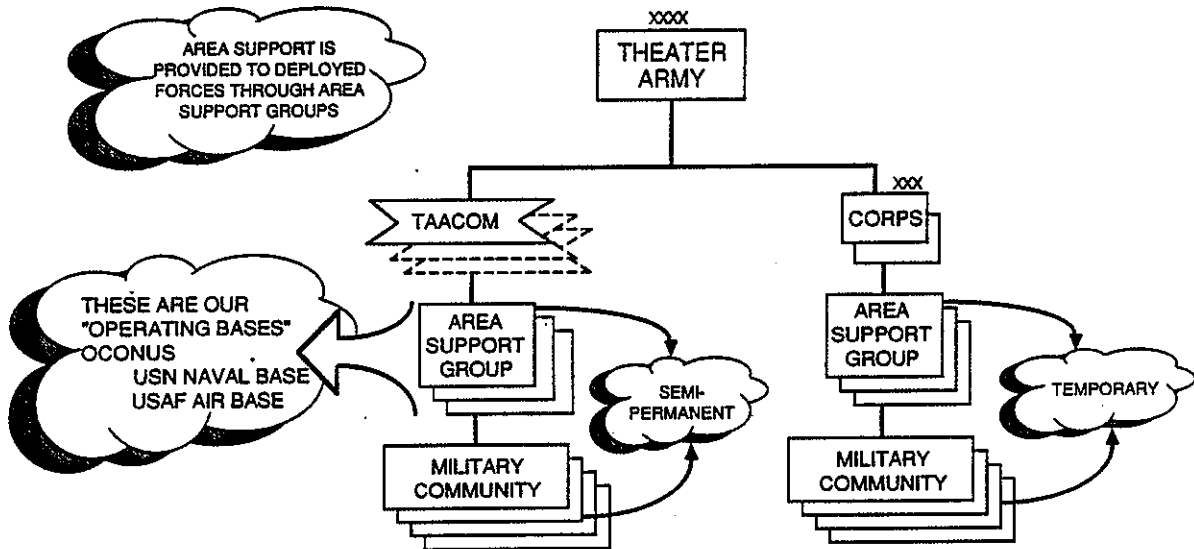

Figure 7-1. Army Component Commands

7.2.4 ANALYSIS

In the Communications Zone (COMMZ) of a forward deployed theater, operating bases (base of operations) currently exist in the form of fixed facilities (i.e. storage, communications, and maintenance) which will be the wartime facilities utilized in the early days of hostilities and as the situation stabilizes. Operating bases would also be established in a theater into which a force deploys. Any operating base will require a management structure to efficiently operate, secure, relocate, and as a base mission changes, reconfigure the support structure. The skills and organization of many of the functions required exist today in the TDA structure of the various MILCOM supporting a forward deployed force. The MILCOM assets have been integrated into the ASG war plans to provide the following types of support:

- (1) Deploy tenant organizations
- (2) Reception and onward movement of units
- (3) Non-combatant Evacuation (NEO)
- (4) Wartime stationing
- (5) BASOPS
 - (a) Transportation Motor Pool
 - (b) Billeting
 - (c) Mess
- (6) Rear Area Protection
- (7) Area Damage Control
- (8) Host Nation Support

It is expected that the MILCOM in the combat zone will execute NEO and other critical transition to war missions. These communities will be closed and control of pre-arranged assets and facilities will be transferred to the tactical commander. In the COMMZ, NEO and other transition to war actions will be accomplished by many of the MILCOM which will remain operational to function as "operating bases". It is this structure that needs to be defined and documented in the TOE structure. In addition, a comparison of TDA to MOBTDA revealed that 23 of the 39 USMCA have a MOBTDA (some of which are identical to the TDA). This fact reinforces the need to include MILCOM in the force structure. This issue is currently working in the form of a USAREUR concept plan. USAREUR believes that the potential exists to convert approximately 2500 TDA spaces to MTOE spaces.

7.2.5 CONCLUSION

Doctrine needs to be revised to integrate "operating bases" i.e. MILCOM into the force structure. Functions in the TDA community structure should be converted to TOE/MTOE structure to coincide with an "operating base" concept.

7.2.6 IMPLEMENTATION

TRADOC should study and if valid incorporate operating base organizations into doctrine and TOEs by FY 90.

7.3 OBSERVATION

Theater support functions (logistics, personnel, engineer, transportation, etc) are provided in and from the COMMZ by two types, area oriented and mission oriented, of support organizations. With the exception of the TAACOM, an area oriented organization, the supporting organizations of the Theater Army (TA) have followed doctrine that has been in existence since World War II.

7.3.1 SCOPE

Current TA doctrinal organization and European Theater as organized today.

7.3.2 PROPOSAL

That the TA functional combat service support (CSS) commands (mission oriented organizations) be converted to operating elements of the TAACOM (see Figure 7-2).

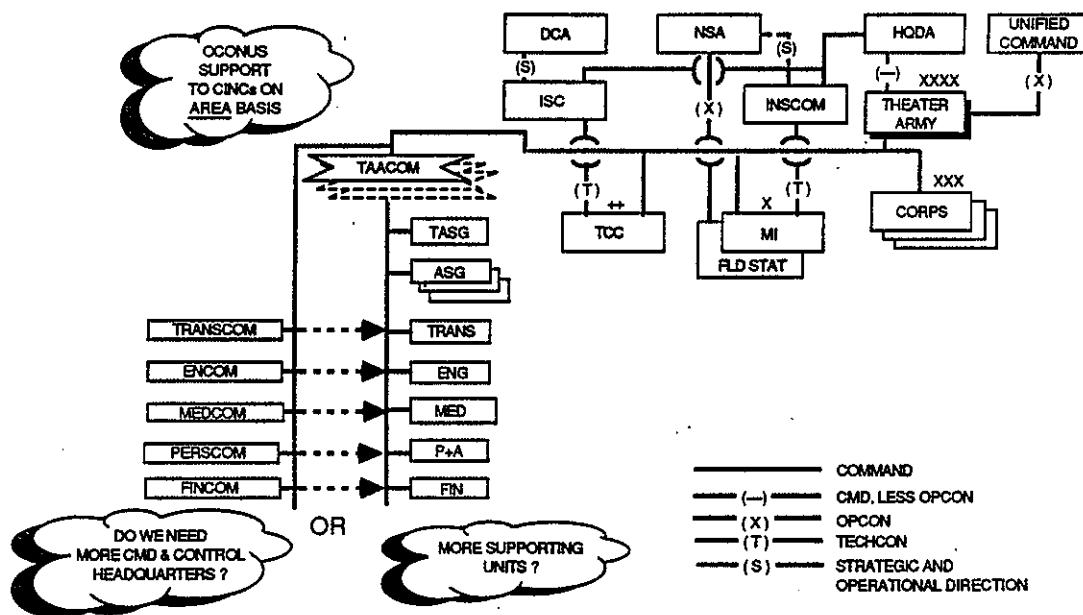

Figure 7-2. Today Army Component Commands

7.3.3 CRITERION

Consolidation of combat service support functions under the operational commander (TAACOM). Future management information systems and communications networks will reduce the requirement for functional headquarters organizations.

7.3.4 ANALYSIS

JCS Pub 1 describes command and control (C2) as "the exercise of authority and the direction provided by a properly designated commander over assigned forces in the accomplishment of his mission". The commander's authority is applied through the exercise of operational and administrative control. Operational control consists of those functions involving the assignment of tasks, designation of objectives or priorities and authoritative direction necessary to accomplish the mission. Administrative control consists of those functions involving fiscal management, training, administrative support, and internal organization. These control functions are performed through an arrangement of personnel, equipment, communications, facilities and procedures em-

played by the commander in planning, directing, coordinating and controlling forces and operations.

The TA commander apportions forces and logistical support based on the priorities established by the operational commander. The TA is a planning and coordinating headquarters that manages its support functions through a flexible combination of area oriented support commands and functionally specialized organizations. Figure 7-3 is a type TA organization.

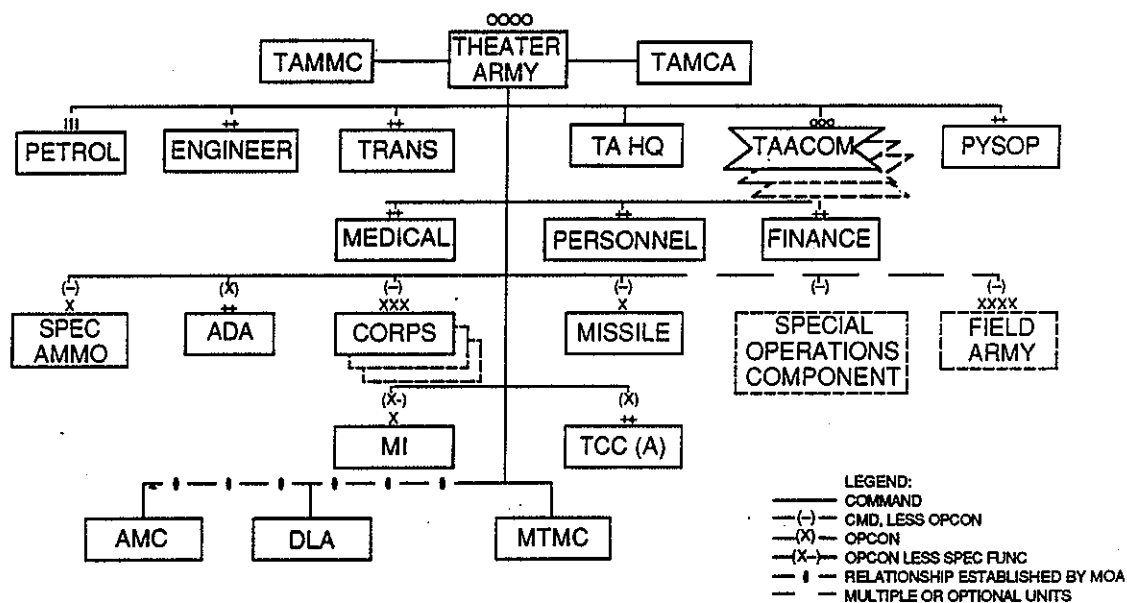

Figure 7-3. TA Organization

Current knowledge of the friendly and enemy situation and the ability to rapidly exploit this knowledge provides a commander the capability to influence the outcome of a battle. Automation permits a vast amount of information to be collected and made readily available to the commander. Used correctly, it can significantly enhance the commander's ability to effectively and efficiently employ his resources toward successful mission accomplishment. Used improperly, it can create bottlenecks and provide misleading information that can be extremely detrimental to the accomplishment of the mission.

The current doctrinal mission of a TAACOM is to provide direct support (DS) CSS and general support (GS) supply, support, maintenance, and services (less medical, COMSEC, and map supply) to units passing through or located in the COMMZ and to other forces as directed by the TA Commander. The TAACOM is the key

logistics operator in the COMMZ, and functions as a major subordinate command under the TA. A type TAACOM organization is displayed in Figure 7-4.

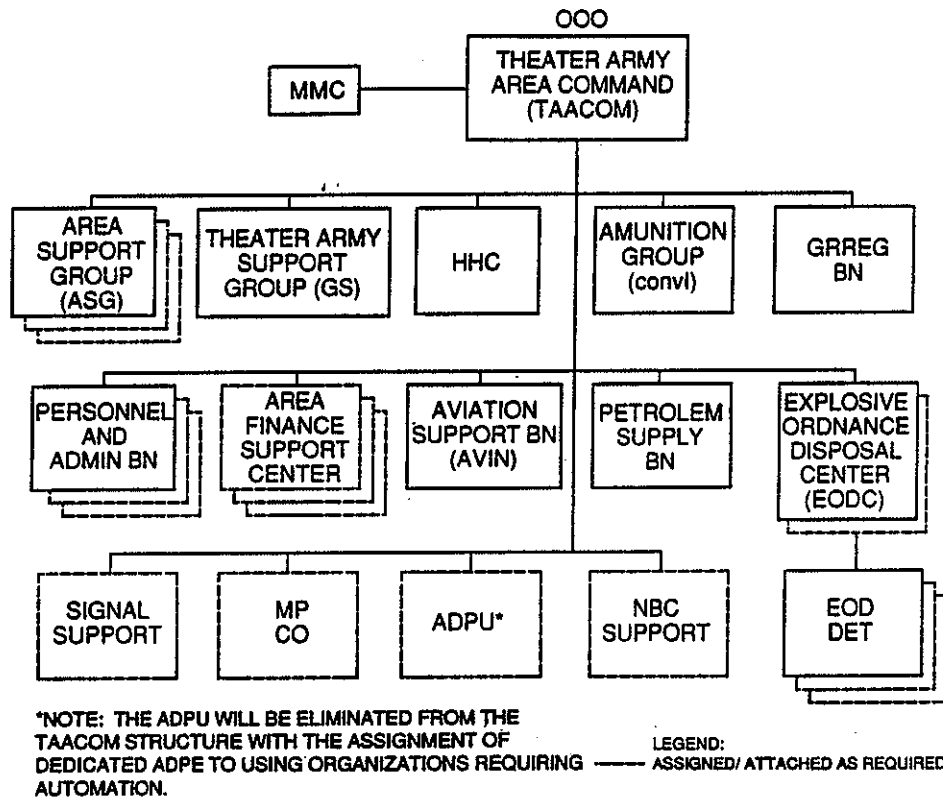

Figure 7-4. TAACOM Organization

The TAACOM is also responsible for planning, coordinating, and executing rear area protection operations within the COMMZ. The TAACOM may also be assigned the mission of storage and maintenance for TA prepositioned war reserves and other theater stocks.

The number of TAACOM assigned to a theater is dependent on the size of the theater as expressed in terms of force to be supported, workloads, and geographical area. The TAACOM is tailored with units to provide needed support. The types and numbers of subordinate units are dependent on the number and composition of Corps and the units within the COMMZ.

The Theater Army Support Group (TASG) is assigned on the basis of one or more per TAACOM, depending on geographic area and number of subordinate units, and is the GS supply, maintenance, and field service operator within the COMMZ.

ASG are assigned to the TAACOM and are structured to provide DS CSS (less ammunition, COMSEC logistics, classified map supply, and medical supply and support) for units located in or passing through its assigned geographic area. Normally, one ASG is assigned to a TAACOM for every 15,000 - 30,000 troops to be supported in the COMMZ.

The functional CSS commands of a TA in the COMMZ which provide support in a mission oriented basis (personnel, engineer, finance, transportation, and medical) provide GS to forces in both the combat zone and the COMMZ.

Transportation Command (TRANSCOM) provides transportation support in the areas of mode operations, to include inland waterways, rail, motor, and air; terminal services beach, air, motor and rail; and transportation movements and highway regulation. USAREUR had a TRANSCOM until 1 Oct 88. When 4th TRANSCOM was converted to the 4th Transportation Brigade and assigned to the 21st TAACOM. This action put theater transportation management under the theater logistical manager.

Medical Command (MEDCOM) provides command and control over TA medical units and activities that provide theater-wide Health Service Support (HSS). Medical command and control will normally be established on an area basis. The geographic area will normally coincide with those of the TAACOM or one or more ASG. The TAACOM and/or ASG will receive staff medical support from the senior medical headquarters in the area. The TA medical management information system is an automated system which provides functional operations and management of medical regulating, blood bank services, patient accounting, and medical materiel and maintenance support.

Personnel Command (PERSCOM) provides theater replacement planning, unit replacement, filler requirements, strength accounting and casualty reporting. Direct personnel and administrative services in the COMMZ are provided by P&A Battalions assigned to the ASG of TAACOM.

Theater Finance support is accomplished by a Theater Finance Command (FINCOM) under the staff supervision of the TA Comptroller. Area finance centers are attached to Corps and TAACOM on an area support basis.

Engineer operations at Echelon Above Corps (EAC) include construction, real property maintenance activities, topographic support, and combat engineering (mobility, counter mobility, survivability and general engineering) (maintenance of main supply routes, airfield repair, bridge maintenance, construction of or hardening of key logistical and communications facilities) within the theater of operations. Command and control of EAC engineer units is exercised through subordinate engineer headquarters. Command and control of facilities engineering and fire protection units may be

exercised through TAACOM and ASG. Support is provided on an area basis by the ASG, TAACOM, and Engineering Command (ENCOM) in accordance with TA priorities. ENCOM boundaries will normally coincide with ASG and TAACOM boundaries, and specific ENCOM subordinate elements will be identified to provide GS support to each ASG and TAACOM.

Technological advances in computer hardware, software and communications networks are exponentially increasing the ability to collect and process data. The collection, verification, and reduction of data to a media as close to the source as possible is an essential function to preclude delays in processing and creation of bureaucratic networks that can easily become bottlenecks. Expected future technological advances in the capabilities of automation systems is the basis of this proposal.

As discussed above each of the functional commands at the theater level is providing type support on an assigned area basis. In several cases the area support organization is already a part of, attached to, or operating within the TAACOM area. The heart of this proposal is that given increased management information and communication systems capability do we need theater functional management headquarters, (see Figure 7-5) or can the TA coordinating staff be organized to provide the policy, guidance, and directives to accomplish the TA commanders mission?

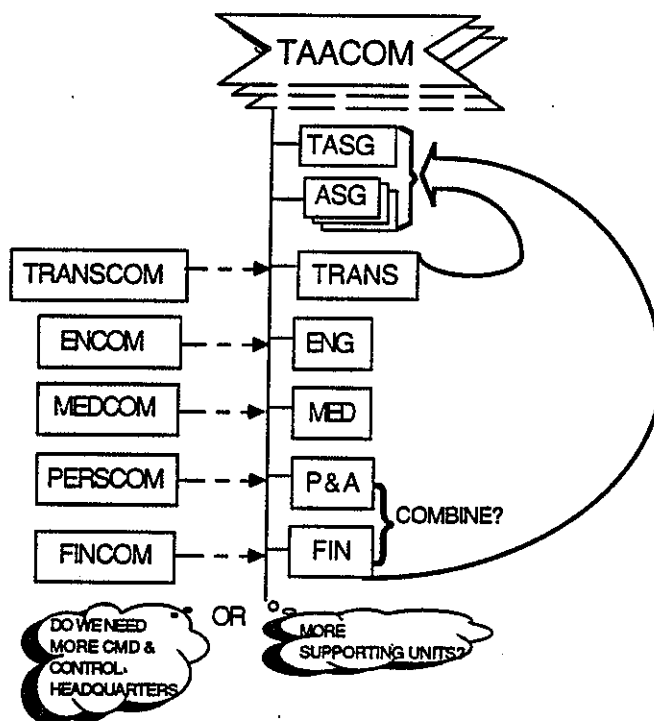

Figure 7-5. Theater Functional Management Headquarters

A major concern raised in the development of this issue is that historically when a concept utilizing new systems is determined to be feasible and is under development the manpower authorizations for the current mission are often deleted before the management information and communications system is fully fielded.

The result is the new system is inoperable and abandoned before it has been properly resourced.

7.3.5 CONCLUSION

The doctrine of the functional commands needs to be examined in the light of improved management information systems (automation and communication) to determine if the TA coordinating staff could perform the same function.

7.3.6 IMPLEMENTATION

TRADOC should review doctrine for the 21st Century to determine the feasibility of consolidating all support type functions of the COMMZ under one type command (TAACOM).

7.4 OBSERVATION

Annex B to Chapter 7, The BDM Corporation Evaluation of TDAs in Support of Theater Army, 23 Nov 1988, Chapter III.

7.4.1 SCOPE

USAREUR Military Community Activities (MCAs).

7.4.2 PROPOSAL

Reduce military authorizations and convert some to civilian within USAREUR, Figure 7-6.

<u>MSC</u>	<u>CURRENT MIL AUTHORIZATIONS</u>	<u>FUTURE MIL AUTHORIZATIONS</u>	<u>MILITARY DIFFERENCE</u>

Figure 7-6. Space Redistribution

7.4.3 CRITERION

See Chapter 3 of Annex B to Chapter 7.

7.4.4 ANALYSIS

See Chapter 3 of Annex B to Chapter 7.

7.4.5 CONCLUSION

See Chapter 3 of Annex B to Chapter 7.

7.4.6 IMPLEMENTATION

USAREUR evaluate Annex B, (The BDM Corporation Evaluation of TDAs in Support of Theater Army) by 15 May 1989.

7.5 OBSERVATION

Annex B to Chapter 7, The BDM Corporation Evaluation of TDAs in Support of Theater Army, 23 Nov 1988, Chapter IV.

7.5.1 SCOPE

TDA and MTDAS of USAREUR.

7.5.2 PROPOSAL

Reduce authorizations within eight USAREUR Installation TDAs (see Figure 7-7).

EXECUTIVE SUMMARY

With the exception of the Theater Army Area Command, the functional commander supporting the Theater Army has followed doctrine that has been in existence since World War II. The ROBUST Special Task Force was tasked, in part, to examine TDA augmentation to determine the validity of that element when evaluated in accordance with prioritized criterion. BDM conducted a review of available data, examined Army doctrine and policy and analyzed the taskings of TDA units in support of the European Theater Army. Specific recommendations are to use a USAREUR wide work force management philosophy to reduce authorizations, to modify the Mission Essential Task List (METL) and to conduct further reviews. One recommended review should include all TDA/MTDA and MTOEs that support or augment an MTOE.

Issue: Evaluation of TDAs in Support of the Theater Army

Scope: The Army component Commander has command less OPCON of theater combat and combat support elements that in transition to war become OPCON to the fighting CINCs. Current doctrine maintains command of TAACOMs, TRANSCOM, ENCOM, MEDCOM, PERSCOM, FINCOM and the Petrol Group. With the exception of the TAACOM, this has been doctrine since World War II. While the major manpower associated to these functional commands is MTOE, an examination of TDA augmentations should be made to determine the validity of the TDA element. The TDA of the functional commands should be reviewed to ensure they are in the best posture to support the Fighting CINCs, accomplish the mobilization mission, and do not violate the rules of inefficiency. The Mission Essential Task List (METL) and TDA relational database programs will be used to assist in the analysis of the EAC TDA.

Criterion: The following prioritized criteria were used to evaluate the EAC TDA:

- (1) Support the Fighting CINCs through the Army Component Commanders
- (2) Facilitate the accomplishment of critical mobilization missions
- (3) Reduce or eliminate layering and redundancy
- (4) Eliminate unnecessary functions
- (5) Convert to MTOE if element has wartime mission
- (6) Contract function out

Methodology

The goal of the EAC study is to determine whether current Army organizational structures and manning requirements are best fitted to transition to the most effective force in support of the fighting CINC. This has entailed looking at a variety of unit descriptors, drawn from the Mission Essential Task List and other relevant computer-generated lists and comparing this data against Army doctrine and policy regarding the establishment and manning of TOE and TDA units and their augmentation and mobilization taskings and manning. The study has not been exhaustive because it was not intended to be: personnel and training issues were defined as peripheral to this study and therefore were not considered. Nevertheless, the limited goal of determining whether or not current organizations and manning requirements are properly structured to support the Theater Army in the least time and with the least disruption has been met. This study presents the results of our investigation, states the assumptions that were used, defines the criteria against which we measured our findings, and draws conclusions and makes recommendations.

BDM used a standard research and analysis methodology. We obtained extensive factual descriptors of the organizations to be studied, and looked at them at levels both above and below our primary interest level to ensure that effective command and control and support extended throughout the chain. We examined Army doctrine and policy with regard to these levels to try to determine how well the various command levels fitted, and how

well that fit seemed to aid or hinder the transition to wartime. We examined organizations to attempt to determine how well their roles and missions were defined; and we looked especially closely at TDA units to try to discover if their current designation and manning was appropriate and capable of being sustained through the transition and into wartime. We established a unified set of conventions and agreed on a minimum number of assumptions and then processed our findings within the constraints of those conventions and assumptions. The results are presented as our conclusions. The recommendations which follow are based on our total evaluation of the requirements and the situation, and represent the best judgments of a group of senior, experienced, knowledgeable personnel.

In order to prevent a too mechanical approach to this effort, BDM used cooperating groups at several different locations, each looking at much of the same data but each examining different aspects of the issue. The results achieved by each of these groups were then brought together and further compared against each other and against our tasking. The repetitions served as checks on each other while the differences ensured that all aspects of the subject were covered. This approach also ensured that our findings were not subject to the prejudices of any one person or group, so that a replication of our study would tend to lead to exactly the same conclusions and recommendations.

We followed two basic criteria in establishing our assumptions: there must be as few of them as possible, and they

must be as realistic as we could make them. These provide several advantages, but the most important one is that we are led to see inevitable change as evolutionary and thus more easily controlled. Nevertheless, it must be admitted that changing this set of assumptions by either addition or deletion could affect our results and lead to quite different conclusions and recommendations.

Our assumptions are as follows:

1. There will be no major change in missions, functions, and responsibilities of the organizations covered by this study.
 - a. For example, Military Community Activities (MCAs) will retain current missions in their geographical areas.
 - b. But specific functions and tasks are subject to modification and should be expected to change.
2. Current EAC doctrine for the functional commands will remain unchanged.
3. Department of the Army policies and regulations can be changed.
4. Ceilings on the current military force will not be increased.
5. Ceilings will not be imposed on the civilian workforce. Coordination by and/or approval of the U.S. Ambassador of alterations in the size of the civilian workforce will stay in effect.

The Analysis is categorized into three areas for discussion.

These are:

1. Work force management philosophy
2. Peacetime and mobilization mission review
3. Evaluation of mission/task assignments

Each area will be discussed in turn, giving the analysis, then the conclusion followed by a recommendation.

Work Force Management Philosophy

Analysis

An analysis of the USAREUR MCAs was conducted using the FAS report that sorted European TDAs by assignment code (see enclosure 1). This analysis considered the number of civilians on the MCA TDA in relation to the number of military. The analysis also included the percentage of officer supervisors on each of the TDAs. A recapitulation of this analysis by MCA support activities is in Table 1 (See Enclosure for further data). This information is graphically displayed in Figure 1.

USAREUR MCA STAFFING

*Includes 8 Warrant Officers spread throughout USAREUR

Table 1 USAREUR MCA Staffing

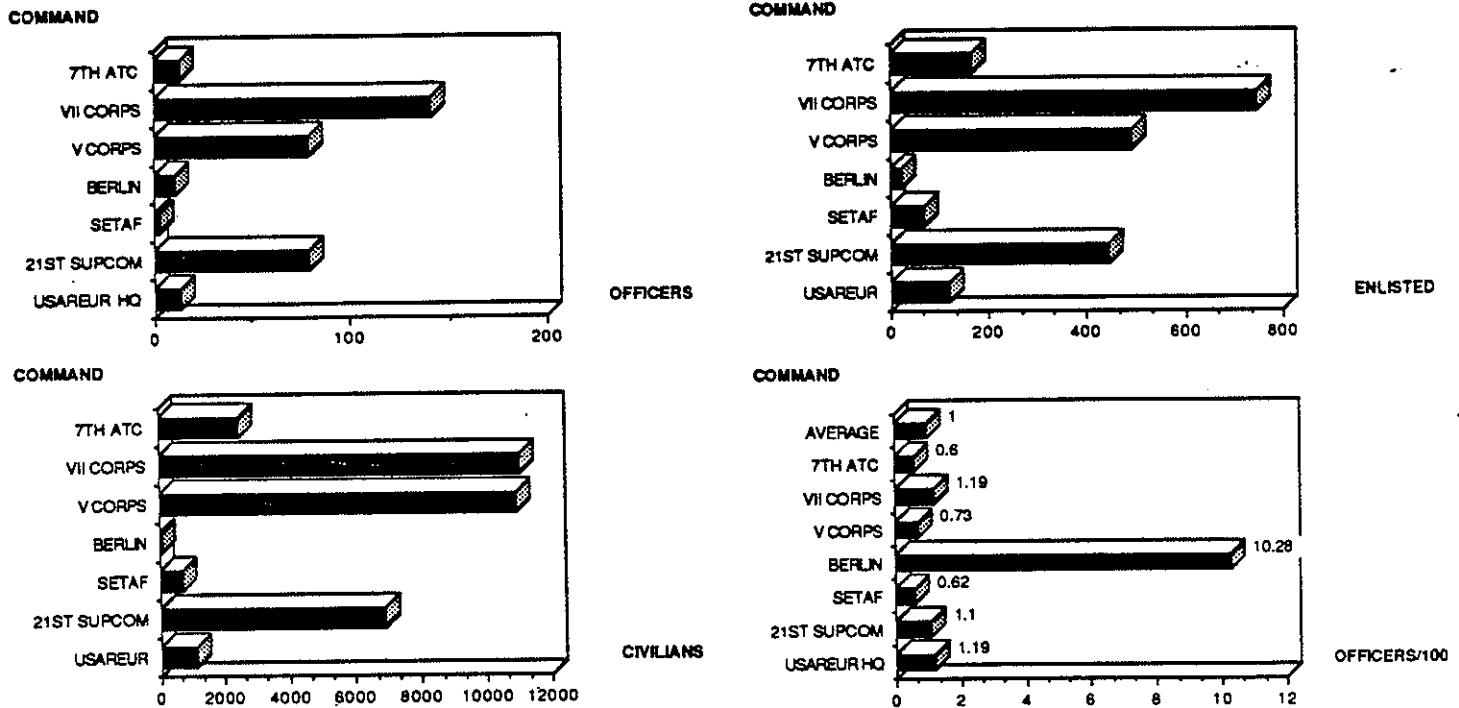

Figure 1 USAREUR MCA Staffing

Conclusion

1. Berlin, USAREUR HQ, and VII Corps appear to have high percentages in officer and enlisted percent manning levels, and low in civilian percentages.
2. V Corps appears to be consistently low in officer and enlisted percentages and high in civilian percentages with the Bad Kreuznach community being lowest in military and highest in civilian staffing. A comparison between Bad Kreuznach and Berlin is graphically displayed in Figure 2.

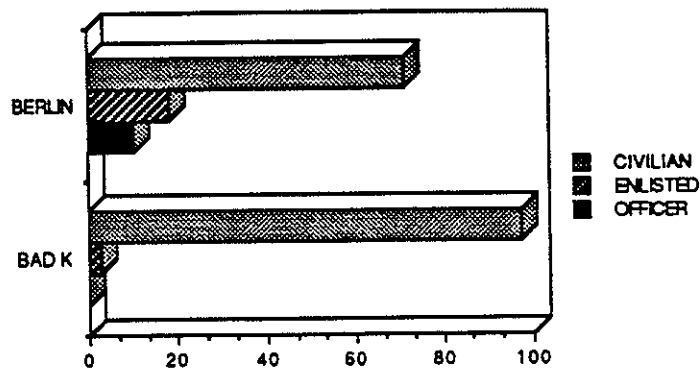

Figure 2 Staffing Comparison

3. There appears to be relatively wide variances within commands and between commands, however, V Corps and VII Corps are internally relatively consistent. When comparing V Corps and VII Corps a variance in work force management philosophy is found.

	<u>V</u>	<u>VII</u>	<u>Variance</u>
Officers (MCA)	80	141	+76% VII Corps
Officers/100 TDA Slots	.73	1.19	+63% VII Corps
Civ/Mil Ratio	18.1	12.4	+46% V Corps

If VII Corps MCA execution philosophy were the same as V Corps, the following military slots could be saved in VII Corps:

VII Corps
 Officers = $\frac{141}{1.63} = 87$ officers required, saves 54 slots

Military = 887 slots in VII Corps x $\frac{(12.4)}{(18.1)} = 608$
 slots required or saves 279 slots (54 officer & 225 enlisted). The same criteria was applied across the major commands in USAREUR. The results are presented in Table 2.

COMMAND	CURRENT	REDUCED	NUMBER SLOTS SAVED		
	MILITARY	MILITARY	TOTAL	OFFICER	ENLISTED
USAREUR HQ	134	62	72	6	66
21ST SUPCOM	529	383	146	28	118
SETAF	75	40	35	0	35
BERLIN	31	4	27	10	17
V CORPS	571	571	0	0	0
VII CORPS	887	608	279	54	225
7TH ATC	183	138	45	0	45
TOTALS	2410	1806	604	98	506

Table 2 Reduced Military Staffing (MCA)

4. Through the application of pertinent planning factors for military community activities it should be possible to achieve a much greater degree of consistency in manning levels of officer and enlisted personnel for MCA functions. The application of those planning factors should be to minimize officer and enlisted strengths and maximize civilian manning. Some of the factors that should be considered are:

- o Number of facilities supported
- o Troop strength supported
- o Dependent strength supported
- o Housing units supported
- o Significant one-of-a-kind activities
- o Dispersion of facilities within community
- o Availability of civilian labor
- o Extent of contracting-out
- o Wartime function

Recommendations

The number of military (officers and enlisted persons) authorized in current TDAs for MCAs in Europe be considered for adjustment to reflect the work force management philosophy currently utilized in V Corps.

Peacetime and Mobilization Mission Review

Analysis

Using tables from Set 6 of the European Mission Essential Task List (METL) an analysis was conducted of those TDA units that had a mobilization mission. This review revealed that there were 46 MTDAs in the Theater Army and that 44 of these modified a currently existing TDA. There were two MTDAs that are currently not in existence. All but one MTDA utilized civilians, either U.S. or foreign nationals, as part of their mobilization personnel authorization.

Ten of the 46 MTDAs had the exact same mission during peacetime as under mobilization. Personnel strength, both military and civilian, varied considerably. Some stayed the same while others had an increase of over 300%. These units are:

WOCBAA	Miesau Army Depot
WOEPAA	European Veterinary Detachment
W1AVAA	Office, USA Commander, Berlin
W1LXAA	Permissine Action Detachment
W33BAA	USMCA Karlsruhe
W33RAA	Signal Support Company
W4HRAA	Reserve Storage Activity, Burton Wood
W4HTAA	Reserve Storage Activity, Hythe
W4S4AA	USMCA, Bentonward, UK
W4S6AA	USMCA, Chievres, Belgium

Only one of these units has the same strength for its peacetime mission and mobilization mission. The remaining nine units have a difference in strength between their two

authorizations totaling 1469 spaces (see enclosure 2).

The majority of the TDAs supporting an MCA during peacetime also had a mission during mobilization. Again reviewing tables from Set 6 of the European METL, 23 of the 38 MCAs had missions during mobilization. Enclosure 4 lists MCAs with and without mobilization missions.

Conclusion

1. Units that currently have the same mission now and during mobilization should have a corresponding similar authorization for personnel. At the present time only one unit has an identical strength while the remaining nine units have a difference totaling 1469 spaces. Considering no change in mission there is a potential for saving up to 1469 space authorizations by adjusting appropriate authorization documents to the lower of the two.
2. Missions and tasks for these MCAs appeared to be similar and only varied in strength because of population supported. Due to the limited time, available resources, and by the scope restriction to TDA units, a detailed analysis could not be conducted. However, realizing that most of the space authorizations in these TDAs/MTDAs are civilian spaces and would still be required after mobilization, consideration should be given to convert these TDAs/MTDAs to MTOEs.

Recommendation

1. A review be conducted of the nine units to determine the appropriate personnel adjustment to accommodate mission accomplishment.
2. A review be conducted of the TDAs/MTOEs, especially those with mobilization missions, to determine feasibility of converting to MTOEs.

Evaluation of Mission/Task Assignment

Analysis

Doctrine concerning Echelons Above Corps (EAC) organization in combined, joint and contingency operations is presented in FM 100-16, Support Operations: Echelons Above Corps. It describes how resources are provided to arm, fuel, fix and man the weapon systems from the ports forward to the user. It discusses support operations during peacetime, transition and sustaining phases applicable to military operations. It also explains the command relationships among EAC units, the elements they support and the organization from which they draw their support.

The missions and tasks outline in FM 100-16 were compared to the mission, function and the Standard Work Center (SWC) codes contained in Table 6 of the European Mission Essential Task List (METL). The mission assigned to a TDA/MTDA unit was one of the following:

- o Structure
- o Manning
- o Training
- o Mobilization/Deployment
- o Facilities
- o Information Management
- o Equiping
- o Sustaining
- o Managing

The SWC code is used to identify a relatively small activity within a broad functional regiment. Personnel within a work center perform work that basically contributes to the same end product or result. The codes and their identification are contained in enclosure 4. An analysis of the SWC codes was made by UIC by location to determine that assigned tasks and functions assigned to units and organizations:

1. Followed the doctrine prescribed in FM 100-16.
2. Met the criteria outlined at the beginning of this issue.

During the analysis of the SWC codes, identical taskings were found in the METL on numerous occasions for the same unit at the same station but with different strength authorizations. Enclosure 5 identifies 11 identical taskings for the same unit (See Text 1, 2 and 3 of enclosure 5). Although enclosure 5 identifies only one unit, this finding was fairly common. The personnel strength allocated to the 11 different text assignments did not exceed the total strength authorized this unit. The SWC code was found to be identical for two units in the same geographical area (See enclosure 6). This was the only example found.

The analysis also revealed that TDAs augmented elements belonging to all of the commands in the Theater Army - TAACOMs, TRANSCOM, ENGCOR, MEDCOM, PERSCOM, FINCOM and Petrol Group. Although only 2 units were found with identical tasks at the same location, similar and identical taskings were found at different locations for units subordinate to different type TOE commands.

Due to the limited time, available resources and by the scope restriction to TDA units, an analysis of redundancy or layering between TDA/MTDA and MTOE units could not be accomplished.

Conclusions

1. The missions, tasks and Work Station Center codes assigned to EAC units in the European Theater Army did not violate the doctrine prescribed in FM 100-16.
2. The SWC code in the European METL does not identify locations of subordinate elements thereby giving the impression that numerous duplicate functions are being performed at the same location.
3. Restriction to analysis of TDA units only, precluded determination of layering and redundancy by TDA/MTDA units supporting and augmenting MTOEs.

Recommendations

1. No action is required.
2. The text portion of the SWC code portion of the METL be modified to include the geographical location of subordinate elements.
3. A review be conducted of all MTOE units that are supported or augmented by TDA/MTDA units or by other MTOE units in accordance with the criterion specified in this tasking.

CHAPTER 8

ARMY COMPONENT COMMAND - U.S. ARMY PACIFIC COMMAND (USARPAC)

Commander-in-chief of the U.S. Pacific Command (USCINCPAC) must work with three Army headquarters when establishing plans and policies for the Pacific Theater. U.S. Army Western Command (WESTCOM), in Hawaii has the responsibility for all Army components in Hawaii and Guam. U.S. Army Japan (USARJ) has the responsibility for all Army components in Japan and Okinawa. Eighth U.S. Army (EUSA) has the responsibility for all Army components in Korea. Each of these headquarters is a major command (MACOM) under the current Army organization and reports directly to the Chief of Staff, Army (CSA). USCINCPAC has gone on record several times as desiring establishment of a single Army component HQ for all of U.S. Pacific Command (USPACOM). The 1988 DOD review of unified and specified command headquarters, known as the "Vander Schaaf Study", identified several staffing headquarters for possible reduction of forces. Several of these headquarters were in the USPACOM area of responsibility (AOR). Finally, Alaska and the forces associated with the defense of Alaska are divided among three organizations. USPACOM has the responsibility for the defense of the Aleutian Islands. FORSCOM has the responsibility for the Alaska Army Reserve component training and readiness. North American Aerospace Defense Command (NORAD) has the responsibility for the defense of the airspace over Alaska.

8.1 OBSERVATION

There is an inefficiency of split responsibility in the Pacific since the USCINCPAC must deal with three separate Army commanders in the Pacific (see Figure 8-1).

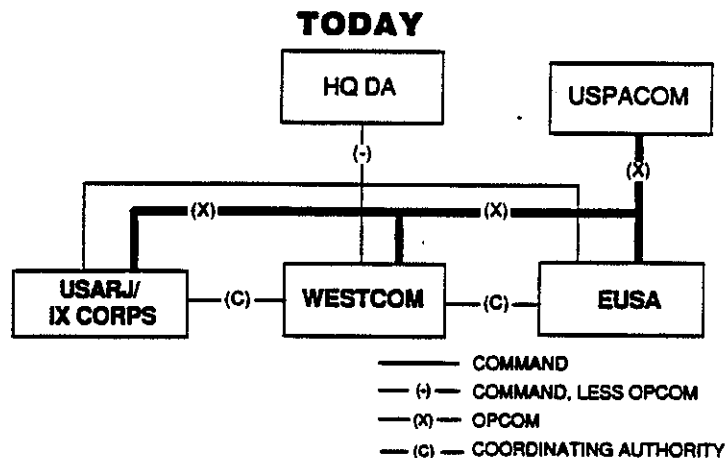

Figure 8-1. USPACOM Army Component Commanders

8.1.1 SCOPE

USPACOM is a unified command and is currently commanded by a Navy admiral. Its AOR extends from the west coast of the United States to the east coast of Africa, and from the Arctic Ocean to the Antarctic Ocean. It includes Korea, Japan, China, Philippines, Australia, India, and other smaller nations of the Pacific and Indian Oceans. USPACOM has approximately 360,000 U.S. soldiers, of which approximately 60,000 (16%) are Army.

Eighth U.S. Army (TDA WATM99) was established as an Army MACOM in Korea on 1 January 1975 and is the ground component of U.S. Forces Korea (USFK), a subordinate unified command to USPACOM. It currently consists of 61 TDA units, with a total military authorization of 2550, and a total civilian authorization of 13,492 (of which 12,454 (92%) are local national hire).

USARJ (TDA W0ATAA) was established as an Army MACOM in Japan on 1 January 1975 and is the ground component of USFJ, a subordinate unified command to USPACOM. It currently consists of 14 TDA units, with a total military authorization of 636, and a total civilian authorization of 3303 (of which 2722 (82%) are local national hire).

WESTCOM (TDA W32FAA) was established as an Army MACOM in Hawaii on 1 October 1979 and consists of 15 TDA units, with a total military authorization of 1383, and a total civilian authorization of 2,807.

8.1.2 PROPOSAL

Reorganize the Army components in the Pacific to allow the USCINCPAC to deal with one Army commander.

8.1.3 CRITERION

USCINCPAC reports to the National Command Authority (NCA) and is under the strategic operational control of the JCS.

EUSA has a mission to attain and maintain a combat readiness posture and to conduct sustained Army, joint, and combined military operations in Korea. Its TDA mission is to perform support functions/missions that are not included in the base TOE. EUSA reports to the CSA for command, less operational command by USCINCPAC. It has a UN peacekeeping mission in Korea and is subordinate to the Combined Forces Army (CFA) of the Combined Forces Command (CFC). The major Army combat unit is the 2d Infantry Division. The major logistical component is the 19th Support Command, a Theater Army level support organization that supports only elements in Korea.

USARJ/IX Corps has a mission to command all U.S. Army units assigned or attached to U.S. Army Japan and to act as the Army component commander to Com-

mander, USFJ. USARJ commander reports to the CSA for command, less operational command by USCINCPAC and USFJ. Its headquarters is a TDA organization with no MTOE. USARJ has command and control of Army elements in Japan and Okinawa. The IX Corps is the only MTOE combat unit and it has a TDA augmentation UIC. The major logistical components are the 17th Area Support Group (ASG) in Japan and the 10th ASG in Okinawa. Both the 10th and the 17th ASG's have an MTOE and a TDA augmentation.

WESTCOM has a mission of theater ground reserve forces, readiness of the Army Reserve component units in USPACOM, development of OPLANS for CINCPAC, and command and control of USPACOM Army Special Forces. The WESTCOM commander reports to the CSA for command, less operational command by USCINCPAC. Currently, it serves as the Army component HQ's to USPACOM, but has only "coordinating authority" for resource management for EUSA and USARJ. WESTCOM is a TDA organization. Its major combat unit is the 25th Infantry Division, which has both an MTOE and a TDA augmentation UIC. WESTCOM's major logistical component is the 45th ASG and U.S. Army Support Command Hawaii (USASCH). The 45th ASG has both an MTOE and a TDA augmentation UIC. The USASCH is a TDA organization with the peacetime mission of installation management and BASOPS.

EUSA is in the process of reviewing the TDA and MTOE's in Korea to identify specific changes that will enhance the warfighting capabilities of the USFK commander. The U.S. Forces Korea-91 Study is chartered to report its findings by March 1989.

USARJ/IX Corps submitted a proposal to organize as an MTOE Theater Army Area Command (TAACOM) in September 1987. The proposal was returned to USARJ without action for lack of supporting justification.

WESTCOM submitted a TDA change in April 1987 to create U.S. Army Pacific (USARPAC), a TDA organization to command and control all of the Army forces in Hawaii and Japan. The proposal was approved by CSA and OSD, but was not approved by Congress due to the requirement for a four star commander.

8.1.4 ANALYSIS

Based on the space redistribution shown in Figure 8-2 reorganization a savings of 243 combined military and civilian spaces could be realized. The restructuring of WESTCOM to USARPAC should be based on current available resources within the Pacific and should achieve economies wherever possible without additional spaces from the rest of the Army.

<u>MANPOWER</u>	<u>CURRENT AUTHORIZATIONS</u>	<u>FUTURE AUTHORIZATIONS</u>	<u>DIFFERENCE</u>
MILITARY	141	116	- 25
CIVILIAN *	542	324	- 218
TOTAL	883	440	- 243

ADVANTAGES:

- **UNITY OF COMMAND IN THE PACIFIC**

* NOTE: DOES NOT INCLUDE FOREIGN NATIONALS.

Figure 8-2. Space Redistribution

In order to better support USPACOM the establishment of USARPAC would:

- (1) Enhance the support to the USCINCPAC, as a warfighting commander by combining three Army MACOM's into one.
- (2) Generate resource economies by integrating MACOM functions now spread across three organizations.
- (3) Parallel the command and control structure of the other service components in USPACOM.
- (4) Parallel the command and control structure of the Army in Europe and align the Army in the Pacific to Army doctrine.
- (5) Assist in structuring the Pacific Theater for mobilization.

The 1989 Defense Appropriations Act established, for the first time, a military ceiling for Korea and Japan. The actual number of soldiers is still being determined at this time. Many Army organizations in USPACOM are physically located on foreign soil under Status of Forces Agreements (SOFA). It is possible that these agreements may be revised, thereby lifting existing constraints and requirements, which will affect organizational structures and physical locations. SOFA constraints would have no impact on the decision to establish USARPAC in Hawaii. Congressmen from Alaska and Hawaii have expressed some concern about the restructuring of USPACOM if it involves adding Alaska or removing troops from Hawaii. The nature of these concerns center around moving those forces out of the state in time of hostilities.

8.1.5 CONCLUSION

USARPAC be organized under an MTOE for a Theater Army for both peace-time and wartime command and control. USARJ be eliminated, but the IX Corps Headquarters remain in Japan until such time as the TAACOM can be established (see issue 8.2 for a more detailed explanation). EUSA Headquarters be eliminated or combined with other U.S. elements in Korea to support the USCINCPAC.

8.1.6 IMPLEMENTATION

This reorganization should take place over the next six years in two phases.

Phase I could take place as early as next year but no later than three years. Under this reorganization USARPAC would be created and take on the command, less operational command of USARJ/IX Corps as specified in the original 1987 USARPAC concept plan. Also during this time period military forces Alaska should be subordinated to USCINCPAC (see Figure 8-3).

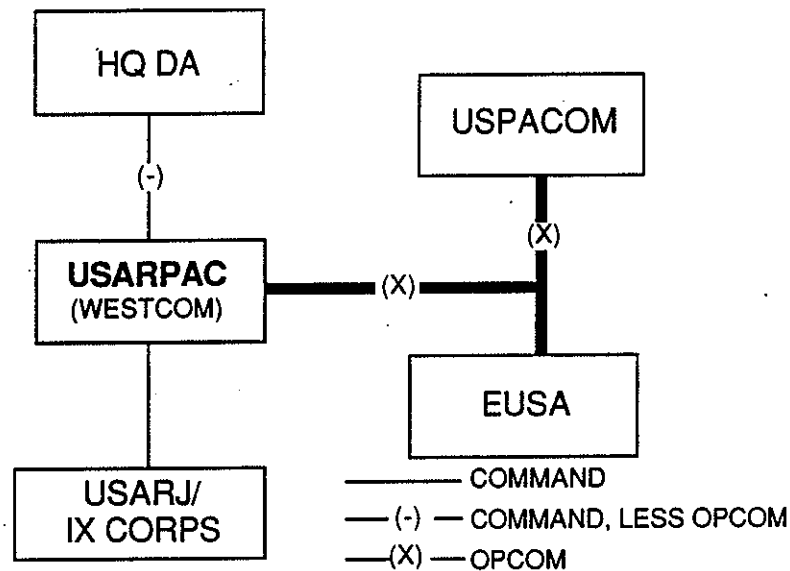

Figure 8-3. Future (Phase I)

Phase II could take place within six years. Under this reorganization EUSA Headquarters would be eliminated and the 2d ID would be under the command, less operational command of USARPAC (see Figure 8-4).

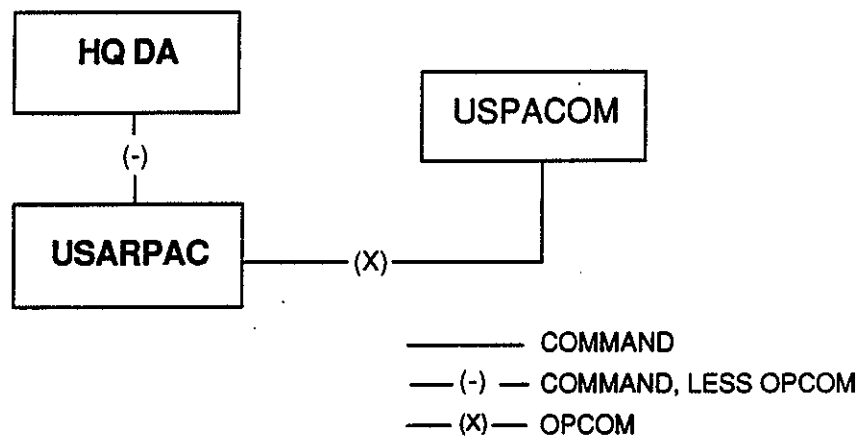

Figure 8-4. Future (Phase II)

- (1) Timing of USARPAC activation, the consolidation of Korean assets, and the reorganization of logistics activities in the Pacific should be coordinated with USCINCPAC.
- (2) The military elements in Alaska need to come under the operational command of the USCINCPAC. If this happens the Army components will come under the operational control of the Army component, USARPAC, to include responsibility for the training and readiness of the reserve and National Guard units in Alaska.

8.2 OBSERVATION

There is no single Army headquarters responsible for coordinating the combat services support in the Pacific.

8.2.1 SCOPE

As stated in the previous issue (8.1) there exists three Army component headquarters in the Pacific Theater that report to the USCINCPAC. There is no one organization controlling the flow of personnel and logistics into the Pacific Theater. Army doctrine, set forth in FM 100-16 (Support Operations: Echelons Above Corps), does allow for the establishment of a Theater Army (TA) and a Theater Army Area Command (TAACOM). Chapter 7 described this organization for today and the future. The missions, geographic spread, and threats within USPACOM dictate the forward deployment of support assets, and an organization to control these assets. There exists today theater level organizations in Korea with MTOE's and TDA Augmentations to support this theater wide mission.

There exists today other Army organizations throughout the Pacific Theater which perform those area support functions at the group and battalion level. The standard installation organization (SIO) has not been fully implemented throughout the Pacific IAW Army Regulation 5-3 (see Figure 8-5).

TODAY		
<u>THEATER FUNCTION</u>	<u>CURRENT ORGANIZATION</u>	<u>SERVICE TO</u>
SUPPORT	19th SUPCOM	KOREA
PERSONNEL	8th PERSCOM	KOREA
FINANCE	175th FIN CEN	KOREA
MEDICAL	18th MEDCOM	KOREA
ENGINEER	2nd ENG BDE	KOREA
TRANSPORTATION	25th TRANS CEN	KOREA

Figure 8-5. Theater Logistics Commands Within USPACOM Focused on Korea Rather Than Entire "AOR"

8.2.2 PROPOSALS

- (1) Establish a single Army component logistics command (TAACOM) with a focus of the entire Pacific AOR.
- (2) Modify the theater CSS functional commands (i.e. PERSCOM, FINCEN, MEDCOM, ENCOM) to brigade or group MTOE units with no TDA Augmentations.
- (3) Standardize all installations in theater IAW AR 5-3, put them under the control of area support groups (ASG's), and assign a Table of Organization (TO) to each.

8.2.3 CRITERION

Continue uninterrupted logistics support to the USCINCPAC and streamline command and control of support functions within the Pacific Area of Responsibility. Provide support on an area basis and identify installations, associated with ASG's, that will continue during hostilities.

On-going Actions:

USARJ submitted a proposal to reorganize as an MTOE TAACOM in March 1988. This proposal should be evaluated again by the USCINCPAC for specific units

that need to be activated and/or moved within theater to facilitate this reorganization. EUSA is in the process of reviewing the TDA and MTOE in Korea to identify specific changes that will enhance the warfighting capabilities of the USFK commander.

WESTCOM commander has established a realignment planning cell to plan and manage internal WESTCOM realignments and to serve as the Army's coordinating element in the Pacific.

8.2.4 ANALYSIS

The missions of all the existing CSS functional commands should be adjusted to reflect a theater wide scope and responsibility. The establishment of a TAACOM, and its associated staff would facilitate the control of all support assets coming into the theater.

Under the TAACOM doctrine, the support that now exists in the Pacific should be reorganized and reduced to allow for geographic dispersion and the number of troops being supported in theater.

AREA SUPPORT GROUPS

<u>AREA</u>	<u>ASG TODAY</u>	<u>ASG NEEDED FOR FUTURE</u>
KOREA	20TH 23D 34TH 501ST	ASG NORTH (Temporary) ASG SOUTH (Operating Base)
JAPAN	17TH 10TH	17TH ASG (Operating Base)
HAWAII	45TH USASCH	45TH (Operating Base)

The following UIC's were identified by the ROBUST On Site Evaluation Team (OSET) as having inefficiencies, and needing further study:

- (1) Need to be organized as MTOE units:
USFAOJ(W3LMAA). This FAO should be organized as an MTOE for a Finance Support Unit (FSU) and be subordinate to the Theater Finance Center.
US MP Det(W3G6AA). This unit has a wartime mission and should be organized as an MTOE under the 17th ASG.

- (2) Need to be consolidated:
- 45th ASG(WDQD99) and USASCH(3RBAA). These two organizations should be combined to provide better service and better align wartime vs. peacetime functions.
- 17th ASG(WDCA99) and 10th ASG(WERG99). These two organizations should be combined into one ASG. The milk plant in Japan should be transferred to the Navy since they are the major user of the service. Also, the laundry and dry-cleaning plant should be transferred to the Air Force since they are the major user of this facility.
- EUSA NCO Academy(W29VAA) and 2d ID NCO Academy(W37AAA). These two organizations need to be consolidated based on the number of U.S. soldiers in Korea.
- Special Troops CFA(W0BTAA). This organization needs to be consolidated with US CFA(W3JGAA) and made an MTOE. The installation duties now being performed need to be removed and given to an ASG.
- (3) Need to be eliminated:
- HHC EUSA(WAH499). This organization should be eliminated and the support functions taken over by the SIO that supports the CFA or UNC.
- U.S. Training Support Activity(W395AA) and ITEP Non-div Trng Std Office(W4CRAA). These two organizations do not need separate UIC's. They need to be consolidated as a paragraph in the operations section of their parent organization.
- U.S. Combat Support Coordination Tm #1(W34HAA) and Tm #3(W4ENAA). These UIC's need to be consolidated as a paragraph under their parent organization MTOE.
- (4) Need to be reorganized to support BASOPS:
- USARJ(W0ATAA). BASOPS functions within this organization should be transferred to the 17th ASG to allow one organization to perform BASOPS both in peacetime and in wartime. Also as a part of this is the staff engineer and the facility engineer should be consolidated.
- HHC 2d ID Aug(WAH499). All installation support functions should be eliminated from this organization and given to the ASG that supports them.
- 21st Trans Co Aug(WCLY99). The wartime functions associated with war need to be documented on the MTOE. The peacetime functions, such as driver instruction, need to be transferred to the consolidated motor pool organization of the installation.

U.S. Korean Service Detachment(WOE7AA) and U.S. Facility Engineer Activity(W3PCAA). These stovepipe organization UIC's need to be eliminated and the functions and resources should be transferred to the SIO chain of command.

EUSA Special Troops Command(W4QCAA). There appears to be a duplication of effort with other organizations in the Yong San area. If this organization has a wartime mission it should be given an MTOE. This UIC could be the SIO for the management of installations north of Seoul.

Based on these inefficiencies and the need for reorganization a savings of approximately ten percent (10%) could be realized. This would be a combination of military and U.S. civilian spaces that would be eliminated, converted to contract, or moved into USAR/ARNG for mobilization only. Specific inefficiencies in existing TDA's need to be evaluated for redistribution (see Figure 8-6).

<u>MANPOWER</u>	<u>CURRENT AUTHORIZATIONS</u>	<u>FUTURE AUTHORIZATIONS</u>	<u>DIFFERENCE</u>
MILITARY	3,718	3,348	-370
CIVILIAN*	3,609	3,249	-360
TOTAL	7,327	6,597	-730

ADVANTAGES:

- UNITY OF COMMAND IN THE PACIFIC

* NOTE: DOES NOT INCLUDE FOREIGN NATIONALS

Figure 8-6. Space Redistribution

8.2.5 CONCLUSION

A theater-wide responsibility be given to the existing theater level commands in the Pacific. An MTOE TAACOM infrastructure be established in Japan using the structure as described in Chapter 7 (see Figure 8-7).

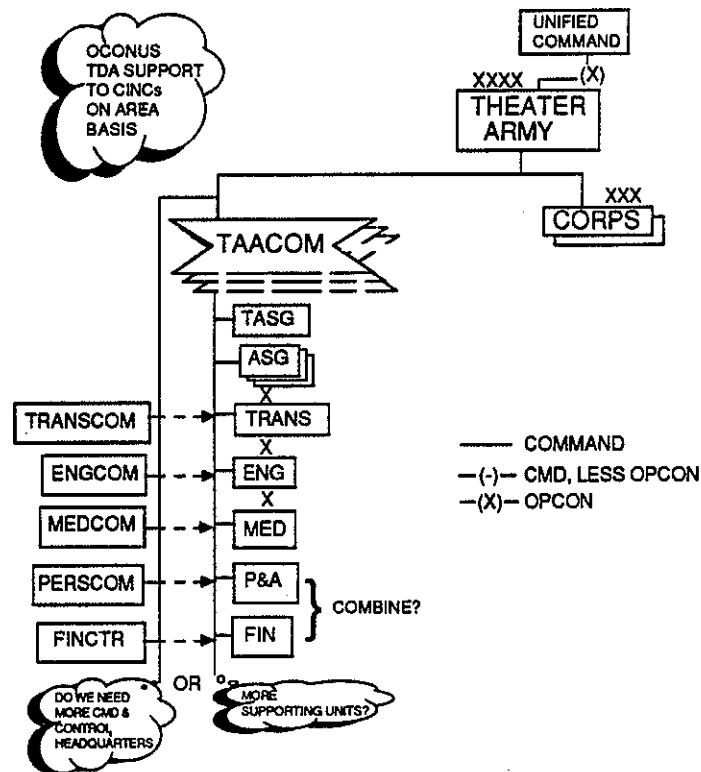

Figure 8-7. Future

A more detailed analysis be conducted to define specifically how many and what is needed in each of the ASG's in the Pacific.

The existing ASG's be given the responsibility for installation support within their assigned geographic areas. These ASG's be organized with a single TO for peace-time and wartime functions, based on the SIO.

8.2.6 IMPLEMENTATION

Establishment of the TAACOM should be phased in over a six year period after specific infrastructure for the ASG's can be determined.

Establishment of SIO's should be accomplished within the next three years using the Korea-91 Study results as a guide and the proposed ASG's as the command and control organization.

USCINCPAC needs one single ground component commander. The Pacific Theater, with its enormous area and requirements for forward deployed logistics bases provide ample opportunity to reorganize and establish one single logistics command, centrally located in theater to support the whole theater. The need to identify TDA's for elimination and conversion is imperative today. All three MACOM's (WESTCOM,

USARJ, and EUSA) need to coordinate a solution for the USCINCPAC and the U.S. Army.

CHAPTER 9

ARMY COMPONENT COMMAND - U.S. ARMY, SOUTH (USARSO)

United States Army, South (USARSO) was activated as a Major Army Command (MACOM) on 6 December 1986. Prior to that date USARSO was a United States Army Forces Command (FORSCOM) installation located in Panama and existed as a TDA augmentation to the 193rd Infantry Brigade (Panama). The 193rd Infantry Brigade (Pan) was a major subordinate command of FORSCOM. As an installation, the TDA augmentation performed some Army Component functions in support of the USCINCSOUTH. The newly activated USARSO was formed from the internal resources available to the Commander, 193rd Infantry Brigade (Pan).

United States Army units have been stationed in Panama since that republic was granted its independence from Columbia in the early part of this century. These units have had the same primary mission since that time, the defense of the Panama Canal. The Panama Canal Treaty of 1977 granted the Republic of Panama a phased take over of United States holdings through the year 2000. At that time the Republic of Panama will take full control of all lands, waters and facilities.

Current political strains between the United States and the Republic of Panama have made it necessary to retain a higher level of Army readiness than was projected eleven years ago. Further, the expanding role of USARSO in support of friendly nations in Central and South America has increased the Army presence at other locations in theater. To validate the actual theater manpower requirements, the United States Manpower Requirements and Documentation Agency (USAMARDA) conducted a comprehensive survey of USARSO and its subordinate activities from 2 November to 20 November 1987. Its recommendations resulted in the civilization of 36 military authorizations.

Over the last year USARSO has organized the 41st Area Support Group (PROV), Personnel Services Company (PROV) and the Military Police Command (PROV). When these units are approved for activation this will convert 242 military authorizations to MTOE (see Figure 9-1).

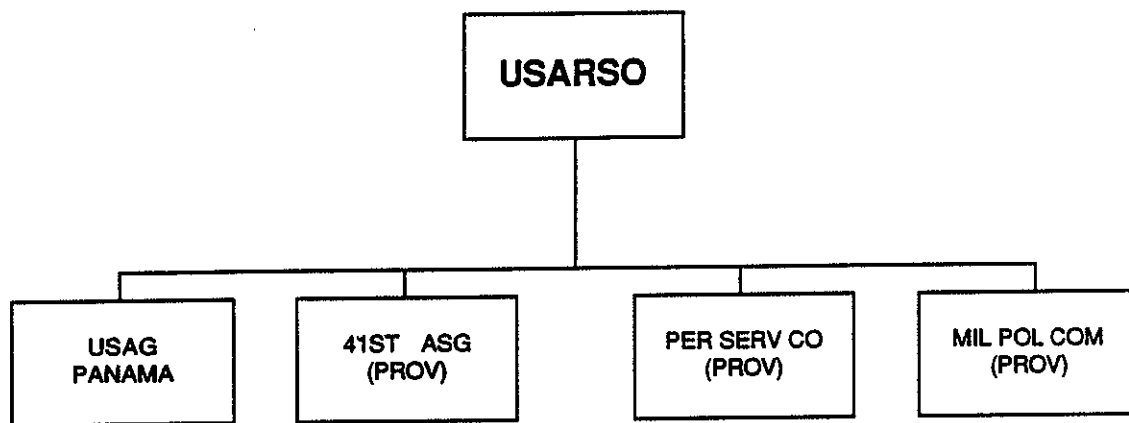

Figure 9-1. U.S. Army, South Today

9.1 OBSERVATION

United States Army, South is properly organized to accomplish its peacetime and wartime mission.

9.1.1 SCOPE

United States Army, South is meeting Army requirements in the Central and South American Theater in a dynamic manner. It was surveyed by USAMARDA one year ago. USAMARDA validated its current structure as meeting existing and future theater requirements.

9.1.2 PROPOSAL

That United States Army, South be maintained as presently configured through 1996.

9.1.3 CRITERION

The mission of USARSO is to command and control assigned and attached US forces in the United States Southern Command (USSOUTHCOM) area of responsibility; provide theater support for United States Army Forces and Headquarters, US-SOUTHCOM; plan, program and provide U.S. Army support for USCINCSO's Regional Security Strategy. As a Major Army Command, USARSO is under the command, less operational control, of the Department of the Army and under the operational control of USCINCSOUTH.

The United States will maintain a military presence in Panama throughout the term of the Panama Canal Treaty. After the year 2000 USARSO will be moved to another location to continue its theater mission.

9.1.4 ANALYSIS

Based on the findings of the United States Manpower Requirements and Documentation Agency (USAMARDA) in its survey of the manpower structure of USARSO, it appears that structure meets theater support requirements through the year 1996 and beyond. The Panama Canal Treaty mandates reductions in U.S. authorizations in some BASOPS functions, through replacement by local national labor. The current political atmosphere in Panama makes any decision to reduce manning levels faster than prescribed in the Panama Canal Treaty of 1977 inadvisable. Previously planned reductions in troop morale, family support, and troop support agencies have been delayed as host nation services are not always available.

United States support to democratic republics in Central America has increased in recent years, offsetting other planned reductions in Panama with increases elsewhere in theater. United States Congressional and Executive level decisions concerning the support of Central and South American nations will affect increases or decreases to manning levels in theater. It is inappropriate to speculate on the direction of such high level policy within this report. USARSO must be structured to meet these mandates when directed. Any manpower redistributions made as the result of Treaty mandated drawdowns in USARSO will go to organizations previously designated to receive them or placed in theaters outside Panama as needs arise.

ROBUST Task Force On-Site Evaluation Team reports and the USARSO MACOM Resource Update confirm the unstable nature of planning force reductions and relocations from Panama. Analysis of Mission Essential Task List (METL) information received from USARSO and USAMARDA findings in November 1987 indicate the structure of USARSO should remain as it is today.

9.1.5 CONCLUSION

United States Army, South is properly organized to accomplish its peacetime and wartime mission as the Army Component Command in support of US-CINCSOUTH.

9.1.6 IMPLEMENTATION

No implementation schedule is required for this recommendation as a stand alone issue. United States Congressional and Executive level decisions concerning the support of Central and South American nations will affect increases or decreases to manning levels in theater. USARSO must be structured to meet these mandates.

Based on the current unstable nature of the situation in Central and South America, and provisions of the Panama Canal Treaty of 1977, reductions in the current manpower levels in the Southern Command area of influence are uncertain. Increases to the SOUTHCOM area would be based on Executive or Congressional policy. The

United States Manpower Requirements and Documentation Agency (USAMARDA) conducted a comprehensive survey of USARSO and its subordinate activities from 2 November to 20 November 1987. Its recommendations resulted in the civilization of 36 military authorizations. Over the last year USARSO has organized the 41st Area Support Group (PROV). When these units are approved for activation this will convert 242 military authorizations to MTOE. Based on USARSO's continued direction to support the USCINCSOUTH in the most efficient and effective manner possible, and its strides at increasing its mobilization through continued transition from Table of Distribution and Allowance (TDA) structures to Table of Organization and Equipment (TO&E), United States Army, South is found to be properly organized to accomplish its peacetime and wartime mission as the Army Component Command in support of USCINCSOUTH.

CHAPTER 10
ARMY COMPONENT COMMAND - U.S. ARMY
CENTCOM (USARCENT)

Title 10 U.S.C. 162 (a) (1) requires the Secretaries of the Military Departments to assign all combat forces under their jurisdiction to Unified and Specified Commands. Third United States Army (TUSA), a combined MTOE/TDA structure, provides Army support to USCENTCOM. TUSA, a planning headquarters without forces assigned in premobilization posture, fills rapidly with Active and Reserve Component units for immediate deployment. Although TUSA, less units while in premobilization status, is not in accord with the Goldwater-Nichols Reorganization Act of 1986, major command status (MACOM) will afford the maximum opportunity to posture for mobilization readiness.

10.1 OBSERVATION

USARCENT/TUSA is the Army component command to CENTCOM but is subordinate to FORSCOM.

10.1.1 SCOPE

HQ, USARCENT operates "as a MACOM" for all Army matters within USCENTCOM Joint Area of Responsibility as outlined in JCS Publication 2, DOD Directive 5100.1 and the Unified Command Plan. At the same time HQ, TUSA is under the command, less OPCON, of HQ, FORSCOM for matters pertaining to the organization, resourcing, training, readiness, and mobilization of Army forces identified for the support of CENTCOM (see Figure 10-1).

TODAY

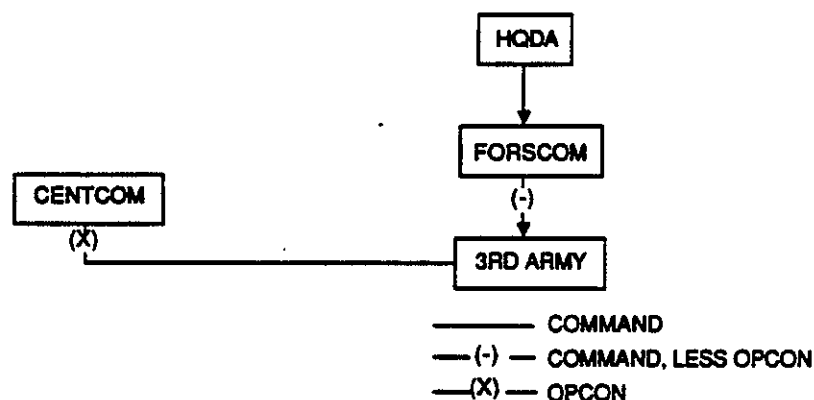

Figure 10-1. Observation: Third Army's Subordinate To FORSCOM And Is Designated As Army Component Commander To CENTCOM Without MACOM Status

10.1.2 PROPOSAL

Designate TUSA/USARCENT as an Army component command with MACOM status in support of USCENTCOM.

10.1.3 CRITERION

Provide capability to assume command for the preparation, provisioning, employment, and sustainment of Army component forces in support of CINC CENTCOM missions; as they pertain to U.S. national objectives and strategy in peace and war.

10.1.4 ANALYSIS

FORSCOM has command, less OPCON, of the Army Component Command to USCENTCOM. Removal of FORSCOM layer, and establishment of Major Army Command (MACOM) status for USARCENT will provide the CINC a direct link to the Army command. This is a part of a generalized restructuring of the TDA Army to provide maximum support to CINCs. Direct command relationship from the CENTCOM CINC to the Army Component Command will facilitate premobilization and mobilization planning. MACOM structure for USARCENT provides for greater CINC command and control, efficiency, planning, etc. USARCENT has the primary mission to plan for deployment of Active Component, ARNG and USAR units in support of USCENTCOM missions. Removal of FORSCOM layer and establishment of USARCENT as an independent MACOM organized as a MTOE Field Army will streamline departmental structure for improved support to CINC. This simplifies the organizational structure of both the Army and the National Command Authority; while providing a direct command relationship to CENTCOM in premobilization and during hostilities (see Figure 10-2.)

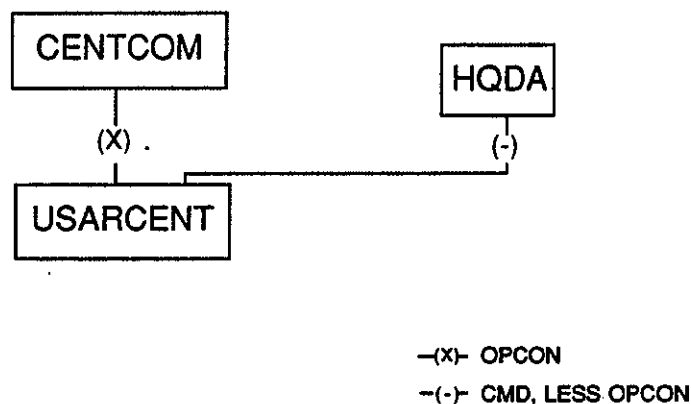

Figure 10-2. Future Organizational Structure Of Army And The National Command Authority

10.1.5 CONCLUSION

USARCENT be designated an independent MACOM in support of CENTCOM.

10.1.6 IMPLEMENTATION

HQ, DA DCSOPS direct reorganization of TUSA as an MTOE Field Army, and designate USARCENT as an independent MACOM during FY 1990. Simultaneously relieve FORSCOM of command less OPCON of TUSA. Disestablishment of TUSA as a FORSCOM command may require back-fill of the Deputy CG position, presently a dual status position held by TUSA Commander.

CHAPTER 11

ARMY COMPONENT COMMAND - U.S. ARMY, SPACE (USARSPACE)

- THE GOLDWATER-NICHOLS LEGISLATION REQUIRES WARFIGHTING CINCS TO BE SUPPORTED BY SINGLE ARMY COMPONENT COMMANDS
- ARMY MISSION IN SPACE WILL EXPAND RAPIDLY INTO THE TWENTY FIRST CENTURY
- TECHNOLOGY WILL EXPAND AT AN INCREASINGLY RAPID RATE, REQUIRING SYSTEMS TO BE FIELDDED AND RETIRED FASTER THAN THE ARMY ACQUISITION SYSTEM CAN RESPOND
- REAL TIME WEATHER/TERRAIN DATA TO ANY USER
- WORLD-WIDE POSITION AND AZIMUTH WITH GPS
- SPACE BASED IEW SENSORS/PROCESSORS WITH ACCESS BY ANY REQUIRED ECHELONS
- SPACE BASED DISTRIBUTED COMMUNICATIONS, COMMAND AND CONTROL ASSETS INTEGRATED WITH GROUND ASSETS
- STRATEGIC DEFENSE USING BOTH DIRECTED ENERGY WEAPONS AND KINETIC ENERGY KILL VEHICLES
- SPACE BORNE RADAR FOR GROUND/AIR TARGET DETECTION/TRACKING
- SPACE BASED ARMY FORCES TO COUNTER SPACE BORNE THREAT FORCES

Figure 11-1. View of the Future

The Army has been involved in the national space effort from the beginning of U.S. missions into space. This involvement has remained unfocused. It has depended on specific systems or programs to activate resourcing. On 7 April 1988 United States Army, Space (USARSPACE) was activated as the Army Component Command to the United States Space Command. Activation of USARSPACE started the Army's earnest effort to shape its role in space. USARSPACE was activated from the Army Space Agency, a Field Operating Activity (FOA) of the Army Deputy Chief of Staff for Operations and Plans (DCSOPS).

Despite its new Army Component role, USARSPACE has remained a FOA of DCSOPS. The Vander Schaaf Study recommended against an Army Component Command to U.S. SPACECOM, citing among other reasons the Army's lack of commit-

ment to the United States Space effort. The Army, by its 7 April 1988 action, has answered the Vander Schaaf Study's criticism. Yet that action did not unite all of the Army's fragmented efforts in space into a single organization. There are two other operational organizations which also are framing the Army's future in Space. These are the U.S. Army Strategic Defense Command (SDC) (a FOA of the office of the Chief of Staff, Army) and the Army Space Program Office (ASPO) (a FOA of the Army DCSOPS).

The Army Strategic Defense Command was activated 5 January 1985 to oversee the Army's portion of the Strategic Defense Initiative Organization (SDIO). Since 1985 it has taken the lead in three of the six Strategic Defense Initiative (SDI) Phase 1 technology programs. These are the Exoatmospheric Reentry Vehicle Interception System (ERIS), the Ground-based Surveillance and Tracking System (GSTS) and the Battle Management/Command, Control, and Communications (BM/C3). It has also taken the lead in six of seven follow-on technology programs. SDC has operational roles, other than its Research, Development and Acquisition (RDA) functions. These roles tie closely with the roles of USARSPACE in its role as the Army Component Command to U.S. SPACECOM. The Office of the Chief of Staff, Management Directorate, Report on CONUS Based Organizations Operating OCONUS (The Stovepipe Study), dated 14 August 1987, validated the SDC mission as a function of the Secretary of the Army, under Section 3013 (b) (4), Title 10, U.S. Code, thus exempting its overseas missions from the requirement of being placed under the command and control of Army Component Commands, as directed by the DOD Reorganization Act of 1986. This exemption included, in the Stovepipe reports analysis, the SDC command of the United States Army Kwajalein Atoll (USAKA) Test Range.

The Army Space Program Office is an operating agency of the DA DCSOPS which ties together Army Space Programs with groundbased Army users. Due to the sensitive nature of its work, and its relatively small staff, it goes almost unnoticed in its work with Army missions in space.

In a letter to the Vice Chief of Staff of the Army, dated 11 July 1988, the Commander of the Strategic Defense Command outlined a recommendation to combine his command, USARSPACE and the Army Space Program Office into a single command to provide the visibility and clout necessary to keep the Army space effort evolving. The new command would be given Major Army Command (MACOM) status under his proposal.

11.1 OBSERVATION

Each of three unique organizations provide partial support to the United States Space Command (see Figure 11-2).

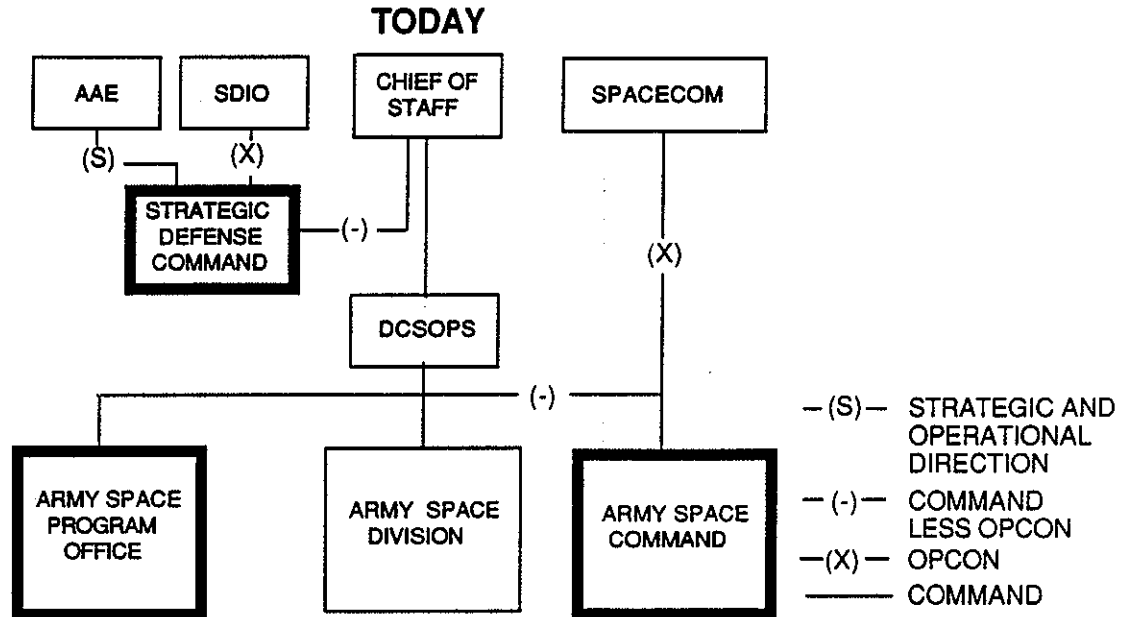

Figure 11-2. Each of These Unique Organizations Provide Partial Support to the United States Space Command

11.1.1 SCOPE

The Army's Space effort is fragmented. The Army will face increased fiscal and personnel constraints in the immediate future. A primary target for those constraints will be the Army Space efforts. In its fragmented state the Army Space effort will fall prey to fiscal and personnel cuts. The Army must place immediate direction to its role in space and provide for the dramatic changes that will occur in the twenty first century. The Army has a future in space. It must combine its limited space directed resources to meet that future.

11.1.2 PROPOSAL

Transfer the Army Space Program Office (ASPO) to USARSPACE. Consolidate the Program Execution Office and Program Management positions of the Strategic Defense Command into a single unit, separate from its Headquarters. Consolidate the Strategic Defense Command and USARSPACE into a combined USARSPACE. Designate USARSPACE as a Major Army Command (MACOM).

11.1.3 CRITERION

The mission of USARSPACE is to perform the role of Army Component Command to U.S. SPACECOM, to provide Army perspective for Space system support to Land Forces and Strategic Defense operations, to integrate Army requirements into CINCSpace operations and plans, to command assigned Army forces and to conduct planning for use of Department of Defense space systems. As the Army Component Command to U.S. SPACECOM, USARSPACE directly supports USCINCSpace. Due to the nature of its mission indirect support is provided to the other five area CINCs. USARSPACE is configured for both peace and war.

As a result of the tragic explosion of the Space Shuttle Challenger in January 1986 both the Executive Branch of the government and the Congress have put all of United States efforts in space to the test. This oversight continues. Any Army Space effort must meet with the strictest of guidelines and be cost effective. Public pressure on both branches of Government to keep all space initiatives on track continues.

The mission of the Strategic Defense Command is to conduct a research program for defense against ballistic missiles, to coordinate Army anti-tactical ballistic missile techbase development, to act as the Program Execution Office (PEO) for the Army portion of the Strategic Defense, and to manage the United States Army Kwajalein Atoll Missile Range. It provides support to the Unified and Specified Commands through research for DOD (SDIO); by developing theater missile concepts and architecture with Allied Nations, USCINCEUR and USCINCPAC; by providing object intimidations and space sensor network support to USCINCSpace; and by acting as the CINCPAC representative to the Republic of the Marshall Islands. Due to the nature of its work, SDC is staffed to meet its mission in peace and war. Assets in the Pacific basin will be backfill for wartime missions in that area. Due to its close connection to the Strategic Defense Initiative, SDC will remain under strict Congressional oversight. Its mission and resourcing is in a constant flux as SDI popularity ebbs and flows in the public eye. The billions of U.S. dollars entrusted to SDC efforts makes it a prime target of Congressional cost saving measures in austere times.

The mission of the Army Space Program Office is to specifically coordinate the execution of the Army Space Program with responsibility across the Army Structure. The mission essential task list for ASPO reveals its mission to establish a total exploitation system capable of tasking, accepting, processing and exploiting space system products and integrating this data with information from other sources to maximize its use by Army forces. It is the primary office responsible for the Tactical Exploitation of National Capabilities (TENCAP), a joint effort to effectively provide national space capabilities to tactical force worldwide. It is by this single effort that ASPO provides

direct support to all area CINCs and their Army Component Commands. ASPO missions in peace are continued in war.

11.1.4 ANALYSIS

The analysis of the ROBUST Task Force began at the point where the Commander, Army Strategic Defense Command concluded. For the purpose of this report Space is an area, with the same importance to the Army's interest as the other areas of Europe, the Middle East, the Pacific basin, Central and South America, and CONUS. Space operations must be as centrally controlled as the actions in any other area command. Under the direction of USCINCSpace this control can be attained, with all services participating in operations of Defense Space systems.

The Goldwater-Nichols Legislation requires warfighting CINCs to be supported by a single Army Component Command. This command is the central and primary agent for all Army operations in area. It is clear from the analysis of ROBUST Mission Essential Task Lists, ROBUST On Site Evaluation Team visit reports, ROBUST MACOM Resource Updates, and discussions with points of contact at the three separate organizations dealing in the operations in Space, that this single area command focus has not been attained within the Army structure. The resources available to the Army to staff and fund its Space efforts are limited, and are therefore too valuable to the Army to be wasted in duplicated and redundant structuring. It is for this reason that Vander Schaaf and others have questioned the Army's commitment to its present and future roles in Space. Those roles and missions are of great importance. They range, in the near term, from space-based command, control, communications and intelligence (C3I) systems directly supporting ground-based forces to the long term mission of placing Army forces in space to counter space borne threat forces.

The technology applied to the space effort is of equal vital importance. This technology is expanding at an increasing rate, requiring systems to be fielded and retired faster than the traditional Army acquisition system can respond. This is not unlike the problems faced by the Army in ground-based, high technology C3I systems. Analysis of the Research, Development and Acquisition efforts currently in the Army

Space Program Office and the Army Strategic Defense Command indicates that for the next fifteen years these efforts are best left under the control of the Space oriented commands. Space-borne systems are tied closely to national objectives, and are dependent on launching/placement priorities established by national authority. In order to achieve maximum product with limited manpower, these efforts should remain linked closely with operational commands (see Figure 11-3).

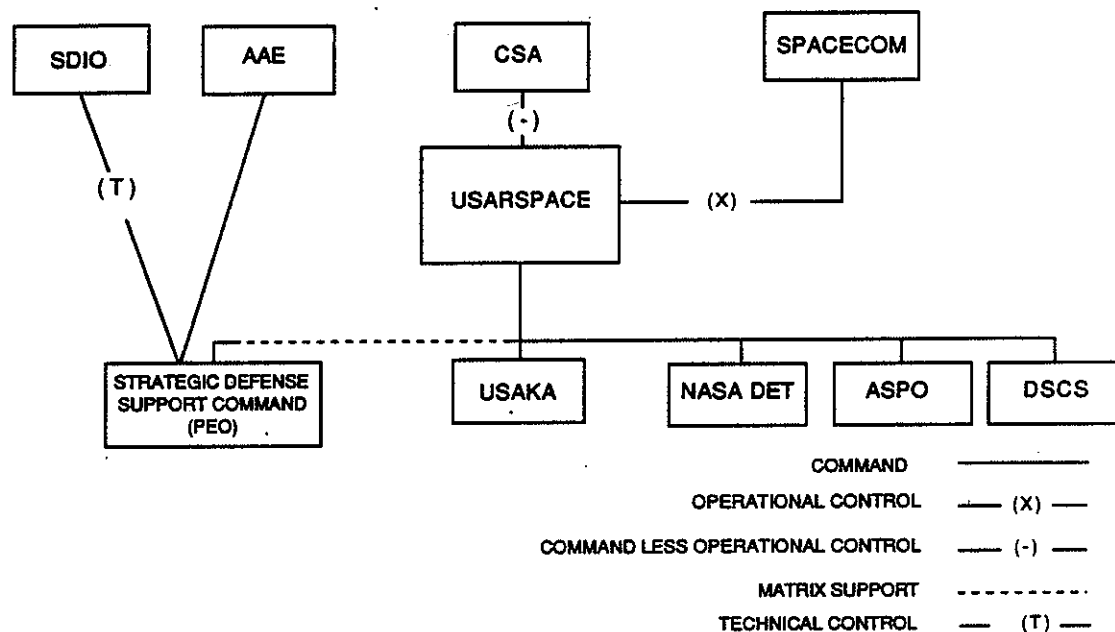

Figure 11-3. Future Support to the United States Space Command

A consolidation of current USARSPACE, Army Strategic Defense Command and the Army Space Program Office into a single command structure is appropriate. This command must be designated and staffed for operation as a Major Army Command. Based on the planned growth of USARSPACE, which will require an unprogrammed manpower increase of 100 to 123 authorized positions and the manpower savings derived from the consolidation of ASPO, USARSPACE (at its present manning level) and SDC, an additional manning increase to the consolidated USARSPACE of

31 authorized positions will allow MACOM staff at a proper beginning level. This increase does not include the 150 to 224 manpower transfers from the Information Systems Command to USARSPACE for management of the Space-related portions of the Defense Special Security Communications System (DSSCS) (see Figure 11-4).

<u>MANPOWER</u>	<u>CURRENT AUTHORIZATIONS</u>	<u>FUTURE AUTHORIZATIONS</u>	<u>DIFFERENCE</u>
MILITARY	214	235	+21
CIVILIAN	1,188	1,198	+10
TOTAL	1,402	1,434	+31

UIC: W4XQAA AMSCO: 202899

ADVANTAGES:

- SINGLE ARMY COMPONENT COMMAND TO SPACECOM
- ECONOMIC COMMAND AND CONTROL STRUCTURE
- EXTRACTS OPERATIONAL FUNCTIONS FROM THE ARMY STAFF
- REDUCES AMHA SPACES WITHIN DA
- FACILITATES CHANGE IN ARMY SPACE EFFORTS
- PREPARES ARMY FOR ITS FUTURE IN SPACE

Figure 11-4. Space Redistribution

Due to the expanding role of the Army in Space, this consolidation should begin in the near term, with total consolidation in the early mid-term. The separation of operational aspects of the Army's missions in Space from the direct command and control of the DA DCSOPS meets the intent of existing Army Management Headquarters Activities policy to move the Army Staff from operational roles. Policy and Guidance for all aspects of the Army effort in Space will still remain under the DCSOPS.

11.1.5 CONCLUSION

The Consolidation of USARSPACE, U.S. Army Strategic Defense Command and the Army Space Program Office into a single Major Army Command with Army Component Command authority to the USCINCSpace should be approved. This consolidation will allow the limited resources available to conduct missions in Space to be used to their maximum. It will further eliminate the current problem of each of three unique organizations providing partial support to the USCINCSpace. This consolidation will establish an economic command and control structure with a small increase in authorizations. It extracts operational functions from the Army Staff and, in doing so,

reduces AMHA spaces with DA. Most importantly, it facilitates change in the Army Space efforts at a time when those efforts are rapidly expanding, thus preparing the Army for its future in Space in a focused and singular direction.

11.1.6 IMPLEMENTATION

The Army Deputy Chief of Staff for Operations and Plans will develop a plan, by 1 July 1989, to organizationally structure USARSPACE, U.S. Army Strategic Defense Command and the Army Space Program Office into a single Major Army Command with Army Component Command authority to the USCINCSpace. This organizational structure will, at a minimum, consolidate all research, development and acquisition functions current in ASPO and SDC into a single subordinate organization aligned by law and regulation to meet Army commitments to the SDIO. Legal relationships between this organization and the Army Acquisition Executive (AAE) will be within the framework of present law. This plan will clearly separate Army Management Headquarters Activities that will be maintained with the DCSOPS and the operational activities to go to the consolidated command. The eventual location for this command will be keyed to ready access to Headquarters, U.S. SPACECOM. Activation of a Consolidated USARSPACE will take place by Third Quarter FY94. The subordination of ASPO to the present USARSPACE will occur by First Quarter FY90. Any civilian position reductions caused in this consolidation will be managed through aggressive placement programs (e.g. DOD Priority Placement Program) to minimize adverse impact on the mission and personnel on the new organization.

The United States Army has a future in Space. This future will be managed by USCINCSpace through its Army component command. Currently, each of three unique Army organizations provide partial support to the United States Space Command. These organizations are U.S. Army Space (USARSPACE), U.S. Army Strategic Defense Command and the Army Space Program Office. The consolidation of these three organizations will provide focus to the Army's Space efforts, and establish a single Army organization to support USCINCSpace. The consolidated units should be designated a Major Army Command (MACOM). This should be accomplished by Third Quarter FY94.

CHAPTER 12
ARMY COMPONENT COMMAND
(CINC WITHOUT AREA OF RESPONSIBILITY)
MILITARY TRAFFIC MANAGEMENT COMMAND (MTMC)

The Military Traffic Management and Terminal Service (MTMTS) was formally activated as a jointly staffed Major Army Command on 15 February 1965. With the approval of its single manager charter on 24 June 1965, MTMTS joined the Military Airlift Command and Military Sealift Command in providing complete transportation services to the Department of Defense. On 31 July 1974 MTMTS was redesignated the Military Traffic Management Command (MTMC) (see Figure 12-1). In 1987, the U.S. Transportation Command was formed and MTMC, along with the Military Sealift Command and Military Airlift Command became its operative components.

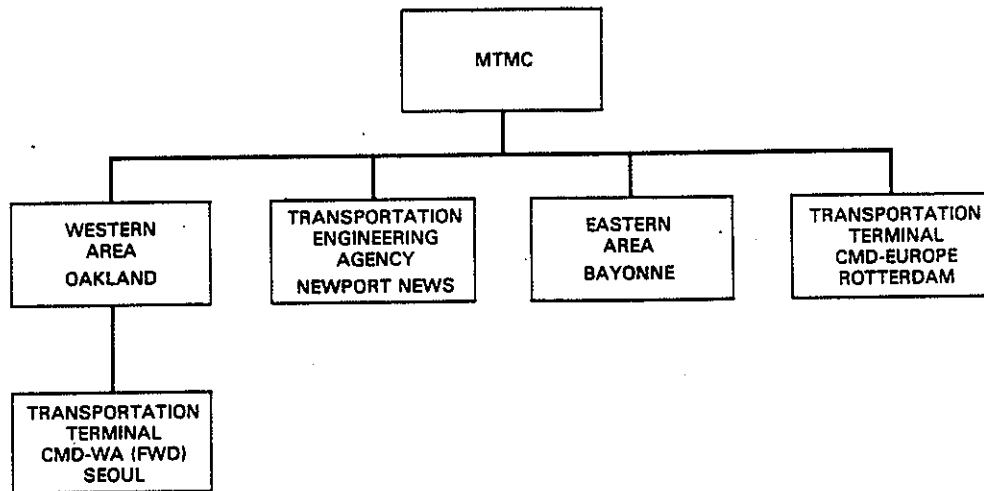

Figure 12-1. Military Traffic Management Command

MTMC supports the warfighting CINCs with movement and documentation of international surface container and breakbulk cargo from origin to destination. MTMC exercises direct route control over all CONUS DOD transportation, less that portion routed by installation transportation offices. MTMC provides passenger traffic support to DOD and the services including centralized management of passengers in groups of 21 or more plus worldwide personal property traffic management. In addition MTMC provides transportation engineering support to ensure that defense transportation needs are met, particularly for deployment and mobilization.

MTMC has a worldwide mission to perform its operational support to the CINCs. It executes this mission on a centralized control but decentralized execution basis with four major subordinate commands as follows. Western Area Office (Oakland, CA) supports the Fifth and Sixth CONUSA and the Pacific Commands. The Eastern Area Office (Bayonne, NJ) supports the needs of the First, Second, and Fourth CONUSA and the Military District of Washington, in addition to USARSO. The third major subordinate command, Transportation Terminal Command, Europe (Rotterdam, The Netherlands) is the water terminal operator for the U.S. European Command. The fourth major subordinate command is the Transportation Engineering Agency, which works to improve the transportability of equipment and deployability of Army units within the worldwide Defense Transportation System.

In strategic mobility planning, MTMC supports the Organization of the Joint Chiefs of Staff, Unified and Specified Commands, DOD Agencies, the Military Services, and the U.S. Transportation Command.

In conclusion, MTMC is a jointly staffed Army component of a unified command which is appropriately structured for peacetime and mobilization.

CHAPTER 13
ARMY COMPONENT COMMAND
U.S. ARMY SPECIAL OPERATIONS COMMAND (1ST SOCOM)

To fulfill our country's special operations needs we have created a joint unified CINC: USSOCOM. In order to support the unified CINC, we should have an Army Component Commander and MACOM capable of providing special operations needs. 1st SOCOM somewhat fulfills that need but, it is not a MACOM, and is subordinate to FORSCOM. FORSCOM has proposed MACOM status for Headquarters (HQ) 1st SOCOM with missions as the Army Component to USSOCOM and the single HQ for Army Special Operations Forces (SOF).

13.1 OBSERVATION

1ST SOCOM is subordinate to FORSCOM and will be an Army Component for Special Operations Forces (SOF) in Dec 90. 1st SOCOM is serving two masters, FORSCOM and USSOCOM

13.1.1 SCOPE

Command and control of Special Operations Forces in all components (see Figure 13-1).

TODAY

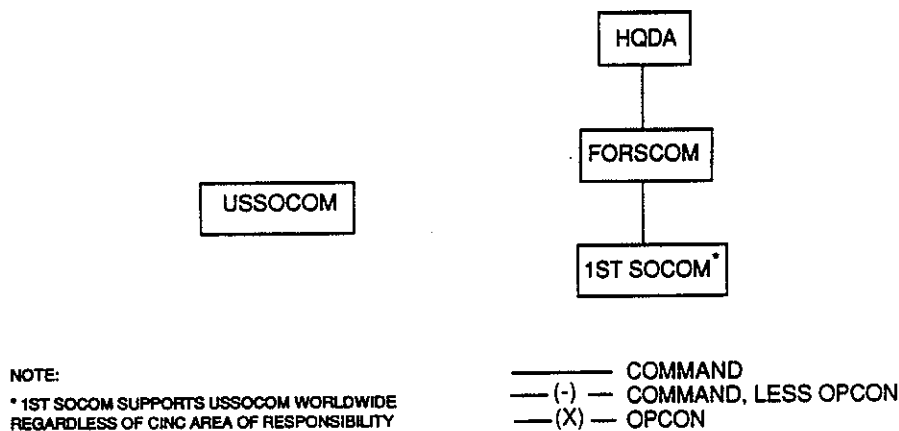

Figure 13-1. Observation: 1st SOCOM is Split Between FORSCOM and USSOCOM; Not Army Component Command or MACOM

13.1.2 PROPOSAL

Identify 1st SOCOM as the Army Component Command to USSOCOM. In Sep 88 CSA decided:

- (1) "OPCON" of USAR Special Operations Forces, Dec 1990,
- (2) "Command" of USAR Special Operations Forces, Sep 1994.

13.1.3 CRITERION

Provide USSOCOM/Regional CINCs with C3I, Operational and Supporting Forces to conduct Special Operations and Contingency Missions, worldwide, during peace and war. Execute OPCON of Reserve Component (RC) Army Special Operation Forces to support Unified Command operations and exercises.

13.1.4 ANALYSIS

1st SOCOM is performing all of its mission. SOCOM is presently endeavoring to meet all of the milestones placed before it, and may expedite their implementation. The removal of FORSCOM as a command layer would not only simplify the organizational command structure but would also provide greater command and control, efficiency, planning, and coordination. The advantages of this proposal are it simplifies the organizational structure; supports congressional legislation to establish clean/efficient command channels for SOF, reduces the FORSCOM command layer, ensures standardization of doctrine/ training/force/structure/materiel/personnel development, provides an enhanced capability for Long Range Planning, and better supports the warfighting CINCs and mobilization (see Figure 13-2).

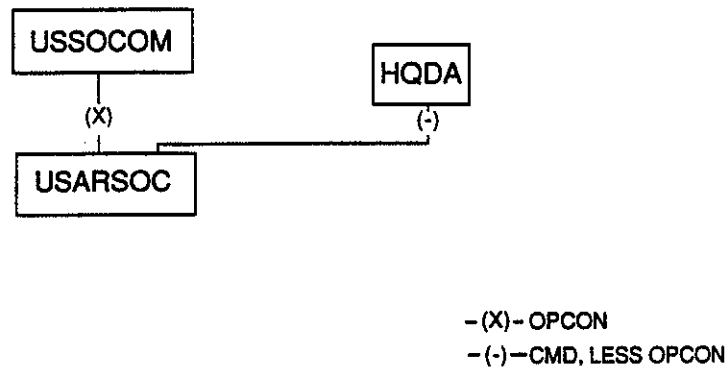

Figure 13-2. Future Organizational Command Structure

13.1.5 CONCLUSION

HQDA, MACOM and all concerned have developed a master plan for transition to MACOM status with zero manpower growth, minimal costs, and improved command and control. The Plan for Active Component transition is well defined, however, to determine the most effective/efficient structure and to redefine manpower, costs, and command and control issues for Special Forces, Civil Affairs and Psyops units and CONUSA/MUSARC functions are:

- (1) 1st SOCOM must now take charge,
- (2) The Secretary of the Army must be briefed.

<u>MANPOWER</u>	<u>CURRENT AUTHORIZATIONS</u>	<u>FUTURE AUTHORIZATIONS</u>	<u>DIFFERENCE</u>
MILITARY:	TRANSITION CALLS FOR ZERO MANPOWER GROWTH		
CIVILIAN:			
TOTAL			

ADVANTAGES:

- SIMPLIFIES THE ORGANIZATION'S STRUCTURE
- SUPPORTS CONGRESSIONAL LEGISLATION TO ESTABLISH CLEAN/
EFFICIENT COMMAND CHANNELS FOR SOF.
- REDUCE FORSCOM LAYER
- ENSURES STANDARDIZATION OF DOCTRINE/TRAINING/ FORCE
STRUCTURE/ MATERIEL/PERSONNEL DEVELOPMENT
- PROVIDES AN ENHANCED CAPABILITY FOR LONG RANGE PLANNING
- BETTER SUPPORTS THE WARFIGHTING CINCs AND MOBILIZATION

Figure 13-3. Space Redistribution

13.1.6 IMPLEMENTATION

Current working milestones based upon CSA conceptual approval on 27 Sep 88 are:

- (1) Dec 88 1st SOCOM begins assumption of some MACOM functions,
- (2) Jan 89 FORSCOM/1st SOCOM submit revised TDA for HQS, 1st, SOCOM as a MACOM (Phase I)
- (3) Apr 89 detailed plan for USAR C-2 presented to Army Leadership,
- (4) Aug 89 USAMARDA conducts manpower survey,
- (5) Oct 89 1st SOCOM submits HQS TDA refinements, and
- (6) Dec 90 HQDA elevates 1st SOCOM to MACOM status.
