

FORT CAMPBELL, KY TO PORT OF JACKSONVILLE, FL POWER PROJECTION PLATFORM (PPP) ROUTE

26 March 2024

BACKGROUND: Power Projection Platforms (PPPs) are defined as military installations that strategically deploy one or more high-priority active component brigade and/or mobilize and deploy high-priority reserve component units. Increased deployment activity requiring a fast and coordinated response has become the normal operational standard within the continental United States. Routes between PPP installations and their designated Air and Sea Ports of Embarkation (APOEs/ SPOEs) are termed PPP Routes. PPP Routes, a subset of the STRategic Highway NETwork (STRAHNET), are the most critical 5,000 miles of public roadways for supporting the safe, rapid, and efficient movement of DoD personnel and equipment. Highways for National Defense (HND) mission requirements call for ensuring PPP Routes are maintained at a capable design, performance, and condition standard to support national emergency deployments.

INSTALLATION: Fort Campbell straddles the Kentucky-Tennessee border between Hopkinsville, Kentucky to the north and Clarksville, Tennessee to the south. Fort Campbell is comprised of approximately 105,000 acres and has over 30,000 military personnel and civilians working on base. The installation's primary SPOE is the Port of Jacksonville, FL.
