Prepared by: Cindy L Howell

We've got a mix of cigs this morning. To the N-NW, we're seeing widespread IFR cigs. S-SE portions of the LFA, including the Class D, are VFR. A few showers are also passing thru. I think the PM will be pretty active for shower/TS activity, maybe up to SCT coverage. IFR cigs could set up around midnight or so tonight, lingering til 09L tomorrow AM, and the PM looks active once again. Possibly one more day of IFR cigs on Wednesday AM, but rain chances will be on the decrease for Wednesday and beyond. The rest of the week looks like a typical July week with just ISOLD TS developing each PM.
