

LMP IS FUNDAMENTAL to the Army's transformation efforts and provides comprehensive, modernized logistics solutions that allow the Army Materiel Command (AMC) to provide world-class logistics readiness to Soldiers. Operational since July 2003, the LMP delivers a fully-integrated suite of software and business processes that streamline the maintenance, repair, and overhaul (MRO), planning, finance, acquisition, and supply of weapon systems, spare parts, services, and materiel to Soldiers where and when they need it.

LMP IN ACTION

1. Unit in Afghanistan loses Apache Attack Helicopter to engine failure...

- Unit requests new engine
- Returns failed engine to Corpus Christi Army Depot (CCAD)

2. Item Manager at Aviation and Missile Command (AMCOM)...

- Immediately sees engine request in LMP
- Issues a new engine to the unit in Afghanistan through LMP
- While in LMP, the Item Manager recognizes that additional engines need repair; uses LMP to issue a repair program to CCAD to fix additional engines and ensure working engine inventory levels are kept adequate

3. Depot Production Planner at CCAD...

- Sees AMCOM repair program in LMP
- Executes engine repairs in LMP
- Uses LMP to put repaired engines back into issuable inventory

SNAPSHOT FROM THE FIELD: LMP Supports Item Managers and Depot Production Planners

Item Managers and Depot Production Planners throughout AMC coordinate the planning, delivery, and return of critical spare and repair parts needed to sustain Army equipment and systems. By helping fulfill the sustainment needs of forward-deployed tactical military units worldwide, Item Managers and Depot Production Planners using LMP are key contributors and participants in sustaining a high readiness posture for the U.S. Army.

Item Managers and Depot Production Planners Work the Entire Repair Process TOGETHER in LMP
